DRAFT

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this, Faculty of Science and Technology (in particular Engineering) of University of Mumbai has taken a lead in incorporating philosophy of outcome-based education in the process of curriculum development.

Faculty resolved that course objectives and course outcomes are to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. Choice based Credit and Grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 13 weeks and remaining 2 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

There was a concern that the earlier revised curriculum is more focused on providing information and knowledge across various domains of the said program, which led to heavily loading of students in terms of direct contact hours. In this regard, faculty of science and technology resolved that to minimize the burden of contact hours, total credits of entire program will be of 170, wherein focus is not only on providing knowledge but also on building skills, attitude and self-learning. Therefore, in the present curriculum, skill-based laboratories and mini projects are made mandatory across all disciplines of engineering in second and third year of programs, which will definitely facilitate self-learning of students. The overall credits and approach of curriculum proposed in the present revision is in line with AICTE model curriculum.

The present curriculum will be implemented for final Year of Engineering from the academic year 2022-23

DRAFT

Incorporation and Implementation of Online Contents from NPTEL/ Swayam Platform

The curriculum revision is mainly focused on knowledge component, skill-based activities and project-based activities. Self-learning opportunities are provided to learners. In the revision process this time, in particular Revised syllabus of 'C ' scheme, wherever possible additional resource links of platforms such as NPTEL, Swayam are appropriately provided. In an earlier revision of curriculum in the year 2012 and 2016 in Revised scheme 'A' and 'B' respectively, efforts were made to use online contents more appropriately as additional learning materials to enhance learning of students.

In the current revision based on the recommendation of AICTE model curriculum, overall credits are reduced to 171, to provide opportunity of self-learning to learner. Learners are now getting sufficient time for self-learning either through online courses or additional projects for enhancing their knowledge and skill sets.

The Principals/ HoD's/ Faculties of all the institute are required to motivate and encourage learners to use additional online resources available on platforms such as NPTEL/ Swayam. Learners can be advised to take up online courses, on successful completion they are required to submit certification for the same. This will definitely help learners to facilitate their enhanced learning based on their interest.

DRAFT

Preamble to the Revision of Syllabus in Chemical Engineering

Development in all fields including Chemical Engineering along with use of software for process plant and process engineering, there is demand on academician to upgrade the curriculum in Education. Choice based Credit and grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. The Curriculum must integrate knowledge of the basic and advanced sciences with problem solving and creativity abilities.

The Curriculum must be broad enough to cover all areas from design to operation of Process plants. It should be deep enough to enable the learners to carry out research and develop products to meet rapidly changing needs and demands. The major challenge in the current scenario is to ensure quality to the stakeholders. Accreditation is the principal means of quality assurance in higher education and reflects the fact that in achieving recognition, the institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program that is being accredited. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation from the program.

With these objectives, online meeting was organized on 30th May 2020 which was attended by heads of the departments and subject faculty of affiliating Institutes. The program objectives and outcomes were thoroughly discussed in line with AICTE guidelines and the core structure of the syllabus was formulated keeping in mind choice-based credit and grading system curriculum along with more emphasis on learning outcomes. Thus, Skilled based laboratories and Mini projects are introduced in appropriate semesters. Views from experts and UG teachers were taken into consideration and final Academic and Exam scheme was prepared with the consent of all the members involved. Subject wise online meetings were held by various subject's convenors to finalize the detail syllabus in 2020.

The Program Educational Objectives finalized for the undergraduate program in Chemical Engineering are:

1. To prepare the student for mathematical, scientific and engineering fundamentals
2. To motivate the student to use modern tools for solving real life problems
3. To inculcate a professional and ethical attitude, good leadership qualities and commitment to social and environmental responsibilities.
4. To prepare the student in achieving excellence which will benefit individually and society at large.

Semester VII

Course Code	Course Name	Credits
CHC701	Instrumentation Process Dynamics and Control	03

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
03	-	-	03	-	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

1. Engineering Physics and Engineering Chemistry.
2. Engineering Mathematics: Linear Algebra, Differential equations and Laplace Transforms
3. Basic laws of Conservations.

Course Objectives

1. To understand basics of process control system and selection of variables for control system design
2. To explain dynamic behavior of processes based on standard process inputs
3. To analyze the characteristics of different measuring instruments
4. To apply the knowledge of closed loop response in selecting different types of control modes based on process requirements.
5. To analyze the stability of closed loop systems based on Bode stability criteria
6. To apply controller performance strategies in designing and tuning controllers.

Detailed Syllabus

Module No	Course Contents	No. of Hours
1	1.1 Introduction to Process Control, Typical Control Problems, A Blending Process Example. 1.2 Control Strategies, the Rationale for Dynamic Process Models, General Modeling Principles. 1.3 Degrees of Freedom Analysis, Selection of Controlled, Manipulated and Measured Variables.	04

DRAFT

2	2.1 Transfer Functions of Typical Systems, First and Second Order Systems, Properties of Transfer Functions and Transfer Functions of Systems in Series. 2.2 Time Delay Processes, Linearization of Non-linear Systems, Dynamic Behavior of Processes, Standard Process inputs, Response of First Order Processes, Response of Second Order Processes, Response of Integrating Processes 2.3 Development of Empirical Models from Process data, fitting First order using Step Tests	12
3	3.1 Introduction Standards and Calibration, Elements of Measuring Systems, Classification of Instruments, Performance Characteristics, Errors in Measurement. 3.2 Measuring Instruments: Flow Measurement, Temperature Measurement, Level Measurement, Pressure Measurement. Control Valve Types, Characteristics and Sizing.	08
4	4.1 Basic Control Modes, Features of PID and On-off Control, Response of Feedback Control Systems, 4.2 Closed-Loop Transfer Functions, Closed-Loop Response	04
5	5.1 Stability of closed loop systems, Frequency Response, 5.2 Stability based on Bode criteria. Gain and Phase Margins	08
6	6.1 Controller Design and Tuning (Zeigler-Nichols controller tuning) 6.2 Performance Criteria, Guidelines for common control loops	03

Course Outcomes

On completion of the course the student will:

1. Develop model of different dynamic systems.
2. Compute system response for various changes in input to the system based on application of Laplace Transform
3. Analyze and select measuring instruments for measuring various process parameters
4. Design controller for controlling output of a specified system
5. Compute stability analysis of a feedback control system based on Frequency response (Bode diagram)
6. Design controller parameters based on Zeigler-Nichols controller tuning method.

Assessment

Internal Assessment (20 Marks):

Consisting **Two Compulsory Class Tests.** First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):

1. Weightage of each module in end semester examination will be proportional to number of respective lectures.
2. Question paper will comprise of total **six questions, each carrying 20 marks.**

DRAFT

3. **Question 1** will be compulsory and should cover **maximum contents of the curriculum.**
4. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).
5. Only **Four questions need to be solved.**

Theory					Term Work/Practical/Oral		Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	
Test-I	Test-II	Average					
20	20	20	80	03 Hrs	--	--	100

Prerequisites

1. Fundamentals of units
2. Elementary theory of engineering mechanics,
3. Engineering drawing.
4. Knowledge of heat transfer and mass transfer
5. Concepts of mechanical operations

Objectives

1. Familiarize with design preliminaries and equipment testing methods.
2. Design of pressure vessels.
3. Design of reaction vessels.
4. Design of heat exchangers.
5. Design of tall columns
6. Understand the concept of storage tank and supports.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Introduction**: Introduction to Chemical process equipment design. Nature of process equipment, Basic consideration in process equipment design, Standards, codes & their significance, equipment classification & selection, material of construction for chemical process equipment, Design pressure, Design temperature, design stress & design loads, factor of safety, Corrosion Allowance & weld joint efficiency.	04

DRAFT

	Equipment Inspection: Methods of Inspection of Equipments Radiography Ultrasound Dye Penetration Fatigue assessment test Pressure test	
2	**Pressure vessel :** Type of pressure vessels, code & standard for pressure vessels (IS: 2825:1969). Pressure Vessel Subjected to Internal Pressure. Complete design of cylindrical Pressure vessel as per IS: 2825: 1969. Study, selection & design of various Heads, material of construction of construction, openings/nozzles, Flanged joints. **High Pressure Vessels:** Theories of failure, material of construction, constructional method of high Pressure vessels. Design of multi layered high pressure vessels (stress distribution diagram).	**10**
3	**Reaction vessel :** Introduction, material of construction, Classification of reaction vessels, Heating system. Types of jackets& design of plain jacket. Types of agitators & their application. Components of agitation system. Power requirement of agitators & their applications, system which includes design of shaft based on equivalent bending moment and critical speed. Design of blades & Blade assembly.	**08**
4	**Heat exchangers :** Material of construction, Design of shell and tube heat exchanger (U-tube and fixed tube sheet as per IS: 4503, TEMA standards)includes shell, tube, tube sheets, channel and channel cover, flanged joints. **Evaporators** Design of standard vertical evaporator with design of calendria and tube, flange evaporator drums and heads.	**08**
5	**Tall columns: (**distillation column) Basic features of columns, stresses in column shell. Shell thickness determination at various heights. Study of Type of column internals (plate and packed column) and supports for trays.	**04**
6	**Storage vessels and supports :** Study of Various types of storage vessels and application. Atmospheric vessels, vessels for storing volatile & non-volatile liquids. Storage of gases, Losses in storage vessel. Various types of roofs used for storage vessels. (calculation of variation in thickness with height only) Introduction & classification of support. (Study)	**04**

Course Outcome

On completion of the course the students should be able to:

1. Apply the concept of Chemical Engineering equipment design terminologies and equipment testing methods.

DRAFT

2. Design pressure and high pressure vessel.
3. Design reaction vessel and agitator.
4. Design heat exchanger and evaporator.
5. Design distillation column.
6. Illustrate and explain the concept of storage tank and types of supports

Internal Assessment (20 Marks):

Consisting **Two Compulsory Class Tests**

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in TestI).

End Semester Examination (80 marks):

- Weightage of each module in end semester examination will be proportional to number of respective lecture
- Question paper will comprise of total **six questions, each carrying 20marks**
- **Question 1** will be compulsory and should cover **maximum contents of the curriculum.**
- **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module3)
- Only **Four questions need to be solved.**

Recommended Books:

1. Process Equipment Design by M.V. Joshi Macmillan India.
2. Process Equipment Design- Vessel Design by E. Brownell and Edwin, H. Young. John Wiley, New York 1963.

Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

1. Knowledge of Physical Chemistry and Electrochemistry
2. .Knowledge of reaction kinetics
3. .Knowledge of material selection.

Objectives

1. To understand corrosion and its related mechanisms and Basic terminologies.
2. Understanding different forms of corrosion and its conditions
3. To understand design aspects for corrosion prevention
4. To Understand the Methodology, Methods and Materials to prevent the Corrosion.
5. To describe the Corrosion Protection techniques, Coatings, Anodic protection, Cathodic Protection and its related topics.
6. To describe and demonstrate the Corrosion monitoring and control methods.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1.	**Introduction** Definition of corrosion, Principle of corrosion , Classification of corrosion, Consequences of Corrosion, Functions and role of a corrosion engineer, Corrosion rate expression, What is over potential, Polarization (Activation and Concentration polarization)	6

2.	**Environmental factors and corrosion**: Corrosion in water and aqueous solutions, Corrosion in sulphur bearing solutions, Microbiologically induced corrosion, Corrosion in acidic and alkaline process streams.	**5**
3.	**Corrosion Electrochemistry and Thermodynamics** Electrochemical Reaction (Anodic and Cathodic process), Faraday's law, Free Energy, standard electrode potential Nernst equation	**6**
4.	**Galvanic and concentration cell corrosion:** Basic concepts, Experimental measurements, and determination of rates of galvanic corrosion, Concentration cells.	**5**
5.	**Eight forms of corrosion:** Galvanic or two metal corrosion, Crevice corrosion, pitting, intergranular corrosion, selective leaching, erosion corrosion, stress corrosion, hydrogen damage	**8**
6.	**Corrosion Prevention:** Design aspects to minimize the corrosion, Material selection, Alteration of environment, Cathodic and anodic protection, coatings	**6**

Course Outcome

On completion of the course the students will be able to:

1. Understand corrosion and its related mechanisms and Basic terminologies.
2. Classify different forms of corrosion and its conditions.
3. To describe the Corrosion Protection techniques, Coatings, Anodic protection, Cathodic Protection.
4. Apply the Methodology, Methods and Materials to prevent the Corrosion
5. The understanding the modern theory principles behind corrosion.
6. To describe and demonstrate the Corrosion monitoring and control methods.

Internal Assessment (20 Marks):

Consisting **Two Compulsory Class Tests**

First test based on approximately 40% of contents and second test based on remaining contents (Approximately 40% but excluding contents covered in Test I).

Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

1. Knowledge of chemistry, physics, physical chemistry and mathematics.
2. Knowledge of fluid mechanics
3. Knowledge of thermodynamics

Course Objectives

The overall aim of this course is to develop a broad background in colloids and interfaces which will enable students to:

1. To study concepts and applications of surface tension, adhesion and capillarity of liquids.
2. To study Intermolecular, nanoscale and interfacial forces in organic, polymeric, biological and aqueous systems.
3. To study Mesoscale phenomenon and its thermodynamics in application of soft matter.
4. To study mechanism of Stability of nanoparticle dispersions.
5. To study nanofluids and its application and working.
6. To study concepts of advanced and functional interfaces.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Surface Tension, Adhesion and capillarity:**	

DRAFT

	Effects of confinement and finite size; Concepts of surface and interfacial energies and tensions; Apolar (van der Waals) and polar (acid-base) components of interfacial tensions. Young-Laplace equation of capillarity; examples of equilibrium surfaces, multiplicity, etc. Stability of equilibrium solutions; Contact angle and Young's equation; Determination of apolar (Van-der Waals) and acid-base components of surface/interfacial tensions. Free energies of adhesion; Kinetics of capillary and confined flows.	**04**
2	**Intermolecular, nanoscle and interfacial forces in organic, polymeric, biological and aqueous systems** Van der Waals, Electrostatic double layer, Acid-base interactions including hydrophobic attraction and hydration pressure.	**08**
3	**Mesoscale thermodynamics** Gibbs treatment of interfaces; concept of excess concentration; variation of interfacial tensions with surfactant concentration**.** **Mesoscale phenomena in soft matter and applications** Adhesion, wetting, nucleation, flotation, patterning of soft material by self-organization and other techniques.	**08**
4	**Stability of nanoparticle dispersions:** DLVO and DLVO like theories and kinetics of coagulation plus general principles of diffusion in a potential field/Brownian movement.	**08**
5	**Nanofluidics:** Stability of thin (< 100 nm) films; self-organization in confined systems; meso-patterning.	**05**
6	**Advanced and Functional Interfaces:** Superhydrophobicity, functional coatings, structural colors, nano-adhesives; nanocomposites.	**06**

Note: Video, Digital, NPTL content can be used for equipment section of each chapter /unit operation.

Course Outcomes

At the end of the course student will be able to:

1. Understand of basic nomenclature, concepts and tools of colloid and interface science and engineering; multi-phase nano-systems; mechanics and thermodynamics on small scales.
2. Understand the differences between the surface and bulk dominated regimes and behavior and exploitation of nano-behavior.

DRAFT

3. To understand and apply Mesoscale phenomenon and its thermodynamics in application of soft matter.
4. To appreciate mechanism of Stability of nanoparticle dispersions.
5. Be aware of nanofluids and its application and mechanism of working.
6. Comprehend concepts of advanced and functional interfaces and its application in chemical industries.

Assessment

Internal

- Assessment consists of average of two tests which should be conducted at proper interval

End Semester Theory Examination

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions to be solved
- Question no.1 will be compulsory and based on entire syllabus where in sub questions can be asked.
- Remaining questions will be randomly selected from all the modules.
- Weightage of marks should be proportional to number of hours assigned to each module.

Prerequisites

1.Communication skills
2.Mathematical skills,
3.Analytical, logical and reasoning Skills
4. Economics

Course Objectives

1.To understand basic concepts project management and application of PM to process industries through class teaching and case studies
2.To understand project feasibility reports and
3.To learn about various clearances required to start an industry
4.To learn various project organizations
5.To learn basics of tendering and contracting
6.To learn various tools and techniques used in PM and understand role of entrepreneurship in the society for the economic growth.

Detailed Syllabus

Module no.	Topics	Contact Hours
1	**Concepts of project management:** Definition of project, project management, project types, project life cycle,Definition of project management, Project deliverables and Stakeholder management,Difference between project management and formal/product management, Role-responsibilities and skills of project manager, project overruns.	08

DRAFT

	Case studies : Superclean paperboards, DEMCO manufacturing , Accorn, Govardhan group	
2	**Project management in process industries:** Project strategy,Project specification, Project engineering, Detailed design,Procurement, Construction, Commissioning and Closure	03
3	**Feasibility report, licensing and clearances** **Feasibility reports:**Pre feasibility report,Techno economic feasibility report,Detailed project report **Contents of feasibility report**:Raw material survey, Market survey and demand study, technical study, location survey, financial survey. Types of cost estimates, Project selection criteria **Estimation of project profitability:** Payback period, Return on Investment (ROI) ,Net Present Value (NPV) , Internal Rate of Return (IRR), Benefit Cost Ratio (BCR) **Industrial license and LOI**, Various laws & regulations governing industries, Need for clearances and influences on project, List of various clearances. **Case studies:** Coal fired boilers project, Plant on river Yangtze, SIRIS pharma Hyderabad	10
4	**Project organization and contracting** Project scope, Types of WBS, Preparation of WBS, Development of responsibility matrix, development of project communication plan. The traditional management structure, Project management organizational structure: pure project, matrix, task force, Project team- responsibilities of various members. Contracts types, selection criteria,3R of contracting, types of reimbursements and tendering procedure **Case studies:** Hindustan oil company-housing project, Comfort flex, Hamad petroleum company	08
5	**Tools and techniques in project Management:** **Project scheduling and execution**: List of various tools and techniques used in project management, Project execution plan (PEP), Bar charts/GANTT charts, LOB Networking techniques PERT and CPM (critical path, float, total float, AOA and AON diagrams), Material Management- ABC and VED Analysis, Economic Order Quantity (EOQ), CAT vs RAT, Time and cost control tools and techniques.	07
6	**Entrepreneurship:** Definition, Concept of entrepreneur and entrepreneurship, Ccompetencies of entrepreneur, Classification and types of entrepreneurship, Creativity techniques for entrepreneur, Startups- pre requisites, stages, ideas and funding Case study: Any example of startup and entrepreneur	03

DRAFT

Course Outcome

On completion of the course the students will be able to:

1. Understand and apply concepts and knowledge of project management to manage projects in process industries
2. Apply knowledge of engineering and project management to create feasibility reports.
3. Understand how to get various clearances required to start industry by following professional ethics.
4. Prepare project organization charts, work breakdown structure, responsibility matrix, project communication plan etc to facilitate better communication and management of projects
5. To apply their knowledge to prepare tenders and contracts which will satisfy needs of society and environment
6. To use tools of PM [Cost benefit analysis, Project execution plan (PEP), Bar charts/GANTT charts, LOB, Networking techniques (PERT/CPM etc] , to analyze and solve complex problems and will be motivated to become entrepreneurs

Internal Assessment

Consisting **Two Compulsory Class Tests**

First test based on approximately 40% of contents and second test based on remaining contents (Approximately 40% but excluding contents covered in Test I).

End Semester Theory Examination:

Question paper will comprise of 6 questions, each carrying 20 marks.
Total 4 questions need to be solved.
Question No.1 will be compulsory and based on entire syllabus wherein sub questions can be asked.
Remaining questions will be randomly selected from all the modules.

Semester VII

Course Code	Course Name	Credits
CHDO7041	Chemical Plant Safety and Hazards (Department Optional Course)	03

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
03	-	-	03	-	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

1. Fundamentals of chemical processes.
2. Knowledge of heat transfer, mass transfer and chemical reaction engineering
3. Concepts of mechanical operations.
4. Knowledge of plant operation and maintenance.

Course Objectives

1. To give overview about occupational health, industrial hygiene, accidental prevention techniques to the students.
2. To give the knowledge about fire and explosion.
3. To train the students about Fire and Explosion prevention methods and Reliefs techniques.
4. To make the student aware about safety in process and plant.
5. To train the students about hazard identification and risk assessment.
6. To train the students about safety procedures and design and expert manpower to handle the complex industrial environment.

Detailed Syllabus

Module No	Course Contents	Contact Hours

DRAFT

1	**Introduction:** History and development of safety movement, Safety programs, Need for safety, Engineering ethics, accident and loss statistics, acceptable risk, The nature of accident process, Identifying the causative and initiating factors of Industrial accidents, Accident prevention and control techniques, Plant safety inspections, Major Industrial Disasters (Case Studies) Bhopal disaster (1984), Chernobyl Disaster, Fukushima Daiichi Disaster etc. Case studies. **Industrial Hygiene:** Definition of Industrial Hygiene, Phases of industrial hygiene, Industrial Hygiene: Control Methods, Substitution, Changing the process, isolation, wet method, local exhaust ventilation, personal hygiene, housekeeping and maintenance, waste disposal, special control measures, Government Regulations, Anticipation and identification, MSDS, Evaluation workers exposure to Volatile toxicants, dust, noise, toxic vapors, Industrial Hygiene : Control	**7**
2	**Fire and Explosions** Fire: Fire triangle, Classification of fires, Flammability characteristics of liquids and gases, Limiting oxygen concentration, ignition energy, auto ignition, autoxidation, adiabatic compression. Ignition sources, spray and mist. Common causes of industrial fires. Explosion: Detonation, Deflagration, Confined explosion, unconfined explosion, VCE, BLEVE, Problems on energy of chemical explosion.	**5**
3	**Concept to Prevent Fire and Explosion (Fire and Explosion prevention methods and Introduction to Reliefs) and Introduction to Reliefs** Inerting: vacuum and pressure purging, combined purging, Controlling Static electricity: Bonding and grounding, dip pipes, Explosion-proof equipment instruments, ventilation. Sprinklers systems. Fire-fighting systems: Different types of portable fire extinguishers, their installation, periodic inspection and operation, Replacement of Halon with safer substitutes, Fire hydrant system, Fire monitors, sprinkler system and deluge system, Carbon-dioxide flooding system, Foam Pourer system Relief concept: Principle of pressure system, Pressure, Hazards of steam, Mechanism of Steam explosion, key components and safety features of pressure system, Failure of pressure system, Hazards of overpressure and over temperature in pressure system, location of reliefs and types of relief.	**6**
4	**Chemical Reactivity and Safety In Plant Operation And Maintenance** Commitment, Awareness and Identification of reactive chemical hazards, characterization of reactive chemical using calorimeter, controlling reactive hazards. Safe procedures for plant start-up and shut-down, Pipeline colour coding for identification of contents, Safety precautions for working on pipelines, Safety in preventive and emergency maintenance work.	**6**
5	**Hazard Identification and Risk Assessment**	**6**

DRAFT

	Hazard Identification: Hazard identification and risk control approaches and techniques**,** Reactive approach-Incident recall technique (after-the-event approach), Proactive approaches: Critical incident review technique (before-the-event approach), Deductive technique, Inductive technique Process hazards checklists, survey, Hazard and Operability Studies (HAZOP), Maximum Credible Accident Analysis (MCAA)/Quantitative Risk Assessment (QRA), Safety review, Risk assessment: Cause/consequence finding techniques What-if, Fishbone, Why-Why, Root Cause Analysis (RCA), Event tree analysis, Fault tree analysis, Maximum Credible Accident Analysis (MCAA)/Quantitative Risk Assessment (QRA) and LOPA.	
6	**Safety Procedures and Design** Process safety Hierarchy, managing safety, best practices, procedure for safety review and accident investigation, design for process safety, runway reactions, Job safety Analysis (JSA) and investigation of accidents, First aid, Financial costs-direct and indirect, social costs of accidents, Dust explosion, factors of pentagon, causes of dust explosions and controls, handling dusts and Miscellaneous designs for fire and explosions.	**8**

Course Outcome

On completion of the course the students will be able to:

1. give overview about occupational health, industrial hygiene, accidental prevention techniques to the students.
2. Apply the knowledge about fire and explosion.
3. Design and perform Fire and Explosion prevention methods and Reliefs techniques.
4. Implement the knowledge about safety in process and plant.
5. perform hazard identification and risk assessment.
6. prepare safety procedures and design and are expert to handle the complex industrial environment.

Internal Assessment (20 Marks):
Consisting **Two Compulsory Class Tests**
First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):
1. Weightage of each module in end semester examination will be proportional to number of respective lecture
2. Question paper will comprise of total six questions, each carrying 20 marks
3. Question 1 will be compulsory and should cover maximum contents of the curriculum.
4. Remaining questions will be mixed in nature (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module3)

DRAFT

5. Only Four questions need to be solved.

Semester VII

Course Code	Course Name	Credits
CHDO7042	Petroleum Refining Technology (Departmental Optional Course)	03

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
03	-	-	03	-	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

Prerequisites:

1. Knowledge about Formation & Origin of petroleum.
2. Composition & testing methods & basic treatment techniques.

Course Objectives

1. To understand Petroleum Refining processes & products, its evaluation & Treatment techniques.
2. To recognize the significance of petroleum refining is to convert crude oil into useful products.
3. The main purpose of refining petroleum is to make the best use petroleum is a fuel.
4. To understand various cracking processes & its applications in Chemical Industries.
5. Describe the overall approach to petroleum refining and categorize refinery processes and Products.
6. Identify the economic and environmental drivers of petroleum refining;

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Introduction -Origin ,Formation & Composition of Petroleum: :** Importance, Origin theory, Reserves in India & world. Exploration of Reserves, Types of crude, (Based on constituents, Sulphur contents & Degree API). Indian crude reserves & production scenario, Indian Petroleum Industry Scenario, Agencies engaged in upstream & downstream petroleum industry (Government & Private). Properties, composition, UOP Characterization factors.	04
2	**Crude Oil Assay:**	08

DRAFT

	Correlation index, ASTM Distillation, Thermal properties, Crude distillation curves. Important products test & methods, Gasoline, Kerosene, Diesel.	
3	**Crude Oil Processing & Refining**: Dehydration & desalting of crude, Heating of crude, Overall refinery flow diagram, its processes & Products, Low boiling products –LPG production by absorption and amine techniques ,Gasoline, Kerosene & their Specifications, Arrangement of Tower, ADU & VDU, Blending of gasoline, Corrosion problem	08
4	**Treatment ,Techniques & Product Specifications**: Treatment Techniques • Fraction impurities- physical and chemical • Gasoline Treatment: Cooper Chloride process, Unisol process, Dualayer process, Lead doctoring, Merox sweetening and Sulfuric Acid treatment • Treatment of lubes-Solvent treatment: Phenol extraction, Furfural extraction and Duo-sol • Wax: MEK Dewaxing and Propane Dewaxing	08
5	**Catalytic Cracking & Thermal Processes:** Thermal and catalytic Cracking • Cracking: Reactions, Theory, properties: Visbreaking • Catalytic Cracking: Houdri Fixed bed, Moving bed and Houdri Flow • FCC: Flexi cracking and Ortho Flow • Catalytic Reforming • Coking: Delayed coking, Fluid coking and Flexi coking • Hydro cracking- isomax • Alkylation: Sulfuric Acid and H.F. • Isomerization: ALCl3 Process	08
6.	**Asphalt Technology & Environmental issues:** Asphalt Technology: • Sources: Chemical Structure, Action of heat on asphalt and Types of Asphalt • Air Blowing of Bitumen • Speciality Products 1. Environmental Issues	03

Course Outcome

On completion of the course the students will be able to:

1 Recognize the significance crude petroleum and petroleum refinery.
2 Understand and express the overall objectives of fractionate crude petroleum into useful fractions.

DRAFT

3	Apply important physical properties of petroleum products
4	Analyze refinery processes to maximize desired petro products
5	Students will be able to understand upgradation process.
6	Identify the economic and environmental drivers of petroleum refining.

Internal Assessment (20 Marks):

Consisting **Two Compulsory Class Tests**

First test based on approximately 40% of contents of syllabus and second test based on remaining contents of syllabus (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):

- Weightage of each module in end semester examination will be proportional to number of respective lecture
- Question paper will comprise of total **six questions, each carrying 20 marks**
- **Question 1** will be compulsory and should cover **maximum contents of the curriculum.**
- **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module3)
- Only **Four questions need to be solved.**

Reference Books:

Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

- Linear Algebra, Computer Programming

Course Objectives:

- Formulate a real-world problem as a mathematical programming model
- to understand Linear Programming and its applications to the models.
- To understand and solve network transportation and assignment models.
- To understand Game theory and its applications.
- To study and solve the Queuing system problems
- Understand the concept of Network flow and inventory control.

Detailed Syllabus

Module No	Contents	Contact Hours
1	**Introduction to Operations Research:** Introduction, Structure of the Mathematical Model, Historical Standpoint, Methodology, Different Phases, Characteristics, Scope and Application of Operations Research in Chemical Engineering, Limitations of Operations Research. **Linear Programming:** Introduction, Requirement of LP, Basic Assumptions, Formulation of LP, General Statement of LP, Solution techniques of LP: Graphical method, Simplex Method Penalty Cost Method or Big M-method, Duality, Primal – Dual construction, Dual-Simplex Method, Sensitivity Analysis	10
2	**Transportation and Assignment:** Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions – Northwest corner	08

DRAFT

	rule, least cost method and Vogel's approximation method. Optimality test: MODI method. Assignment Problem: Introduction, Mathematical Formulation of the Problem, Hungarian Method Algorithm, Processing of n Jobs Through Two Machines and m Machines, Travelling Salesman Problem	
3	**Queuing Theory:** Basis of Queuing theory, elements of queuing theory, Kendall's Notation, Operating characteristics of a queuing system, Classification of Queuing models, Preliminary examples of M/M/1:∞/FCFA/ **Sequencing:** Basic assumptions, Johnson's algorithm, sequencing 'n' jobs on single machine using priority rules, sequencing using Johnson's rule-'n' jobs on 2 machines, 'n' jobs on 3 machines.	**06**
4	**Inventory Models**: Inventory classification, Different cost associated to Inventory, Economic order quantity, Classic EOQ Model (demand rate uniform, replenishment rate infinite), ABC analysis.	**04**
5	**Decision Analysis and Game Theory:** Decision Making under Certainty, Decision Making under Risk, Decision Under Uncertainty (ONLY NUMERICAL PROBLEMS) **Game Theory:** Competitive games, rectangular game, saddle point, minimax (maximin) method of optimal strategies, value of the game. Solution of games with saddle points, dominance principle. Rectangular games without saddle point – mixed strategy for 2 X 2 games. (ONLY NUMERICAL PROBLEMS)	**07**
6	**Network Models:** Scope and Definition of Network Models, Minimal Spanning Tree Algorithm, Shortest Route Problem, Maximal Flow Model.	**04**
	Total Hours	**39 hrs**

Course Outcomes:

Learner will be able to…

- Model and solve typical OR problems using the simplex method.
- Understand the relationship between a linear program and its dual and Perform sensitivity analysis to determine the direction and magnitude of change of a model's optimal solution as the data change.
- Solve specialized linear programming problems like the transportation and assignment problems.
- Identify and Solve Queuing System.
- Understand the concept of game and Decision theory and solve problems based on the same.
- Understand the applications of network models and an inventory model and compute important performance measures.

Assessment:

Internal Assessment for 20 marks:

Consisting Two Compulsory Class Tests

DRAFT

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

End Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

1. Question paper will comprise of total six questions, each carrying 20 marks
2. Question 1 will be compulsory and should cover maximum contents of the curriculum
3. Remaining questions will be mixed in nature (for example if Q.2 has part (a) from module then part (b) will be from any module other than module 3)
4. Only Four questions need to be solved.

20	20	20	80	03 Hrs	--	--	--	100

Objectives:

- To familiarize the students with the need, benefits and components of PLM
- To acquaint students with Product Data Management & PLM strategies
- To give insights into new product development program and guidelines for designing and developing a product
- To familiarize the students with Virtual Product Development

Outcomes:

Learner will be able to…

- Gain knowledge about phases of PLM, PLM strategies and methodology for PLM feasibility study and PDM implementation.
- Illustrate various approaches and techniques for designing and developing products.
- Apply product engineering guidelines / thumb rules in designing products for moulding, machining, sheet metal working etc.
- Acquire knowledge in applying virtual product development tools for components, machining and manufacturing plant

Module	Detailed Contents	Contact Hours

DRAFT

01	**Introduction to Product Lifecycle Management (PLM):**Product Lifecycle Management (PLM), Need for PLM, Product Lifecycle Phases, Opportunities of Globalization, Pre-PLM Environment, PLM Paradigm, Importance & Benefits of PLM, Widespread Impact of PLM, Focus and Application, A PLM Project, Starting the PLM Initiative, PLM Applications **PLM Strategies:** Industrial strategies, Strategy elements, its identification, selection and implementation, Developing PLM Vision and PLM Strategy, Change management for PLM.	**10**
02	**Product Design:** Product Design and Development Process, Engineering Design, Organization and Decomposition in Product Design, Typologies of Design Process Models, Reference Model, Product Design in the Context of the Product Development Process, Relation with the Development Process Planning Phase, Relation with the Post design Planning Phase, Methodological Evolution in Product Design, Concurrent Engineering, Characteristic Features of Concurrent Engineering, Concurrent Engineering and Life Cycle Approach, New ProductDevelopment (NPD) and Strategies, Product Configuration and Variant Management, The Design for X System, Objective Properties and Design for X Tools, Choice of Design for X Tools and Their Use in the Design Process.	**09**
03	**Product Data Management (PDM):**Product and Product Data, PDM systems and importance, Components of PDM, Reason for implementing a PDM system, financial justification of PDM, barriers to PDM implementation.	**05**
04	**Virtual Product Development Tools:** For components, machines, and manufacturing plants, 3D CAD systems and realistic rendering techniques, Digital mock-up, Model building, Model analysis, Modeling and simulations in Product Design, Examples/Case studies.	**05**
05	**Integration of Environmental Aspects in Product Design:**	**05**
	Sustainable Development, Design for Environment, Need for Life Cycle Environmental Strategies, Useful Life Extension Strategies, End-of-Life Strategies, Introduction of Environmental Strategies into the Design Process, Life Cycle Environmental Strategies and Considerations for Product Design.	
06	**Life Cycle Assessment and Life Cycle Cost Analysis:**Properties, and Framework of Life Cycle Assessment, Phases ofLCA in ISO Standards, Fields of Application and Limitations ofLife Cycle Assessment, Cost Analysis and the Life Cycle Approach, General Framework for LCCA, Evolution of Models for Product Life Cycle Cost Analysis.	**05**

DRAFT

Assessment

Internal

- Assessment consists of two tests which should be conducted at proper intervals.

End Semester theory examination

- Question paper will comprise of 6 questions each carrying 20 questions.
- Total 4 questions need to be solved
- Question no.1 will be compulsory based on entire syllabus wherein sub questions can be asked.
- Remaining questions will be randomly selected from all the modules
- Weightage of marks should be proportional to number of hours assigned to each module

Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Objectives:

- To familiarize the students with various aspects of probability theory
- To acquaint the students with reliability and its concepts
- To introduce the students to methods of estimating the system reliability of simple and complex systems
- To understand the various aspects of Maintainability, Availability and FMEA procedure

Outcomes:

Learner will be able to…

- Understand and apply the concept of Probability to engineering problems
- Apply various reliability concepts to calculate different reliability parameters
- Estimate the system reliability of simple and complex systems
- Carry out a Failure Mode Effect and Criticality Analysis

Module	Detailed Contents	Contact Hours
01	**Probability theory:** Probability: Standard definitions andconcepts; Conditional Probability, Baye's Theorem. **Probability Distributions:** Central tendency and Dispersion; Binomial, Normal, Poisson, Weibull, Exponential, relationsbetween them and their significance. **Measures of Dispersion:** Mean Median, Mode, Range, Mean Deviation, Standard Deviation, Variance, Skewness and Kurtosis.	08

DRAFT

02	**Reliability Concepts:** Reliability definitions, Importance of Reliability, Quality Assurance and Reliability, Bath Tub Curve. **Failure Data Analysis:** Hazard rate, failure density, Failure Rate,Mean Time To Failure (MTTF), MTBF, Reliability Functions. **Reliability Hazard Models:** Constant Failure Rate, Linearly increasing, Time Dependent Failure Rate, Weibull Model.Distribution functions and reliability analysis.	**08**
03	**System Reliability:** System Configurations: Series, parallel, mixed configuration, k out of n structure, Complex systems.	**05**
04	**Reliability Improvement:** Redundancy Techniques: Element redundancy, Unit redundancy, Standby redundancies. Markov analysis. System Reliability Analysis – Enumeration method, Cut-set method, Success Path method, Decomposition method.	**08**
05	**Maintainability and Availability:** System downtime, Design for Maintainability: Maintenance requirements, Design methods: Fault Isolation and self-diagnostics, Parts standardization and	**05**
	Interchangeability, Modularization and Accessibility, Repair Vs Replacement. Availability – qualitative aspects.	
06	**Failure Mode, Effects and Criticality Analysis:** Failure mode effects analysis, severity/criticality analysis, FMECA examples. Fault tree construction, basic symbols, development of functional reliability block diagram, Fau1t tree analysis and Event tree Analysis	**05**

Assessment

Internal

20	20	20	80	03 Hrs	--	--	--	100

Objectives

- The course is blend of Management and Technical field.
- Discuss the roles played by information technology in today's business and define various technology architectures on which information systems are built
- Define and analyze typical functional information systems and identify how they meet the needs of the firm to deliver efficiency and competitive advantage
- Identify the basic steps in systems development

Outcomes Learner will be able to…

- Explain how information systems Transform Business
- Identify the impact information systems have on an organization
- Describe IT infrastructure and its components and its current trends
- Understand the principal tools and technologies for accessing information from databases to improve business performance and decision making
- Identify the types of systems used for enterprise-wide knowledge management and how they provide value for businesses

Module	Detailed Contents	Contact Hours
01	Introduction To Information Systems (IS): Computer Based Information Systems, Impact of IT on organizations, and Importance of IS to Society. Organizational Strategy, Competitive Advantages and IS.	4

DRAFT

02	Data and Knowledge Management: Database Approach, Big Data, Data warehouse and Data Marts, Knowledge Management. Business intelligence (BI): Managers and Decision Making, BI for Data analysis and Presenting Results	**7**
03	Ethical issues and Privacy: Information Security. Threat to IS, and Security Controls	**7**
04	Social Computing (SC): Web 2.0 and 3.0, SC in business-shopping, Marketing, Operational and Analytic CRM, E-business and E-commerce – B2B B2C. Mobile commerce.	**7**
05	Computer Networks Wired and Wireless technology, Pervasive computing, Cloud computing model.	**6**
06	Information System within Organization: TransactionProcessing Systems, Functional Area Information System, ERP and ERP support of Business Process. Acquiring Information Systems and Applications: Various System development life cycle models.	**8**

Internal Assessment

- Assessment consists of two tests which should be conducted at proper intervals.

End Semester theory examination

- Question paper will comprise of 6 questions each carrying 20 questions.
- Total 4 questions need to be solved
- Question no.1 will be compulsory based on entire syllabus wherein sub questions can be asked.

Objectives:

- To understand the issues and principles of Design of Experiments (DOE)
- To list the guidelines for designing experiments
- To become familiar with methodologies that can be used in conjunction with experimental designs for robustness and optimization

Outcomes:

Learner will be able to…

- Plan data collection, to turn data into information and to make decisions that lead to appropriate action
- Apply the methods taught to real life situations
- Plan, analyze, and interpret the results of experiments

Module	Detailed Contents	Contact Hours
01	**Introduction** 1.1 Strategy of Experimentation 1.2 Typical Applications of Experimental Design 1.3 Guidelines for Designing Experiments 1.4 Response Surface Methodology	06
02	**Fitting Regression Models** 2.1 Linear Regression Models 2.2 Estimation of the Parameters in Linear Regression Models 2.3 Hypothesis Testing in Multiple Regression 2.4 Confidence Intervals in Multiple Regression 2.5 Prediction of new response observation 2.6 Regression model diagnostics 2.7 Testing for lack of fit	08

DRAFT

03	**Two-Level Factorial Designs and Analysis** 3.1 The 2^2 Design 3.2 The 2^3 Design 3.3 The General2^k Design 3.4 A Single Replicate of the 2^k Design 3.5 The Addition of Center Points to the 2^k Design, 3.6 Blocking in the 2^k Factorial Design 3.7 Split-Plot Designs	**07**
04	**Two-Level Fractional Factorial Designs and Analysis** 4.1 The One-Half Fraction of the 2^k Design 4.2 The One-Quarter Fraction of the 2^k Design 4.3 The General 2^{k-p} Fractional Factorial Design 4.4 Resolution III Designs 4.5 Resolution IV and V Designs	**07**
	4.6 Fractional Factorial Split-Plot Designs	
05	**Conducting Tests** 5.1 Testing Logistics 5.2 Statistical aspects of conducting tests 5.3 Characteristics of good and bad data sets 5.4 Example experiments 5.5 Attribute Vs Variable data sets	**07**
06	**Taguchi Approach** 6.1 Crossed Array Designs and Signal-to-Noise Ratios 6.2 Analysis Methods 6.3 Robust design examples	**04**

Assessment

Internal

- Assessment consists of two tests which should be conducted at proper intervals.

End Semester theory examination

- Question paper will comprise of 6 questions each carrying 20 questions.
- Total 4 questions need to be solved
- Question no.1 will be compulsory based on entire syllabus wherein sub questions can be asked.
- Remaining questions will be randomly selected from all the modules
- Weightage of marks should be proportional to number of hours assigned to each module

SEM VII		
Course Code	**Course Name**	**Credits**
IOC7015	**Institute Level Optional Subject I- Operations Research**	**03**

Course Hours			Credits Assigned		
Practical	**Tutorial**	**Theory**	**Practical**	**Tutorial**	**Total**
-	**-**	**03**	**-**	**-**	**03**

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	**20**	**20**	**80**	**03 Hrs**	**--**	**--**	**--**	**100**

Objectives:

- Formulate a real-world problem as a mathematical programming model.
- Understand the mathematical tools that are needed to solve optimization problems.
- Use mathematical software to solve the proposed models.

Outcomes:

Learner will be able to…

- Understand the theoretical workings of the simplex method, the relationship between a linear program and its dual, including strong duality and complementary slackness.
- Perform sensitivity analysis to determine the direction and magnitude of change of a model's optimal solution as the data change.
- Solve specialized linear programming problems like the transportation and assignment problems; solve network models like the shortest path, minimum spanning tree, and maximum flow problems.
- Understand the applications of integer programming and a queuing model and compute important performance measures

Module	Detailed Contents	Contact Hours

DRAFT

01	**Introduction to Operations Research**: Introduction, , Structure of the Mathematical Model, Limitations of Operations Research **Linear Programming**: Introduction, Linear Programming Problem, Requirements of LPP, Mathematical Formulation of LPP, Graphical method, Simplex Method Penalty Cost Method or Big M-method, Two Phase Method, Revised simplex method, **Duality**, Primal – Dual construction,Symmetric and Asymmetric Dual, Weak Duality Theorem, Complimentary Slackness Theorem, Main Duality Theorem, Dual Simplex Method, Sensitivity Analysis **Transportation Problem**: Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions – Northwest corner rule, least cost method and Vogel's approximation method. Optimality test: the stepping stone method and MODI method. **Assignment Problem**: Introduction, Mathematical Formulation of the Problem, Hungarian MethodAlgorithm, Processing of n Jobs Through Two Machines and m Machines, Graphical Method of Two Jobs m Machines Problem Routing Problem, Travelling Salesman Problem	**14**
	Integer Programming Problem: Introduction, Types of Integer Programming Problems, Gomory's cutting plane Algorithm, Branch and Bound Technique. Introduction to Decomposition algorithms.	
02	**Queuing models**: queuing systems and structures, single server and multi-server models, Poisson input, exponential service, constant rate service, finite and infinite population	**05**
03	**Simulation**: Introduction, Methodology of Simulation, Basic Concepts, Simulation Procedure, Application of Simulation Monte-Carlo Method: Introduction, Monte-Carlo Simulation, Applications of Simulation, Advantages of Simulation, Limitations of Simulation	**05**
04	**Dynamic programming**. Characteristics of dynamic programming. Dynamic programming approach for Priority Management employment smoothening, capital budgeting, Stage Coach/Shortest Path, cargo loading and Reliability problems.	**05**
05	**Game Theory**. Competitive games, rectangular game, saddle point, minimax (maximin) method of optimal strategies, value of the game. Solution of games with saddle points, dominance principle. Rectangular games without saddle point – mixed strategy for 2 X 2 games.	**05**
06	**Inventory Models**: Classical EOQ Models, EOQ Model with Price Breaks, EOQ with Shortage, Probabilistic EOQ Model,	**05**

Objectives:

- To understand and identify different types cybercrime and cyber law
- To recognized Indian IT Act 2008 and its latest amendments
- To learn various types of security standards compliances

Outcomes:

Learner will be able to…

- Understand the concept of cybercrime and its effect on outside world
- Interpret and apply IT law in various legal issues
- Distinguish different aspects of cyber law
- Apply Information Security Standards compliance during software design and development

Module	Detailed Contents	Contact Hours
01	**Introduction to Cybercrime:** Cybercrime definition and origins of the world, Cybercrime and information security,Classifications of cybercrime, Cybercrime and the Indian ITA 2000, A global Perspective on cybercrimes.	4
02	**Cyber offenses & Cybercrime:** How criminal plan the attacks, Social Engg, Cyber stalking, Cyber café and Cybercrimes, Botnets, Attack vector, Cloud computing, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Devices-Related Security Issues, Organizational Security Policies and Measures in Mobile Computing Era, Laptops	9

DRAFT

03	**Tools and Methods Used in Cyberline** Phishing, Password Cracking, Keyloggers and Spywares, Virus and Worms, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Over Flow, Attacks on Wireless Networks, Phishing, Identity Theft (ID Theft)	**6**
04	**The Concept of Cyberspace** E-Commerce , The Contract Aspects in Cyber Law ,The Security Aspect of Cyber Law ,The Intellectual Property Aspect in Cyber Law , The Evidence Aspect in Cyber Law , The Criminal Aspect in Cyber Law, Global Trends in Cyber Law , Legal Framework forElectronic Data Interchange Law Relating to Electronic Banking,	**8**
	The Need for an Indian Cyber Law	
05	**Indian IT Act.** Cyber Crime and Criminal Justice: Penalties, Adjudication and Appeals Under the IT Act, 2000, IT Act. 2008 and itsAmendments	**6**
06	**Information Security Standard compliances** SOX, GLBA, HIPAA, ISO, FISMA, NERC, PCI.	**6**

Course Code	Course Name	Credits
IOC7017	Institute Level Optional Subject I- Disaster Management and Mitigation Measures	03

Course Hours			Credits Assigned		
Practical	Tutorial	Theory	Practical	Tutorial	Total
-	-	03	-	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Objectives:

- To understand physics and various types of disaster occurring around the world
- To identify extent and damaging capacity of a disaster
- To study and understand the means of losses and methods to overcome /minimize it.
- To understand role of individual and various organization during and after disaster
- To understand application of GIS in the field of disaster management
- To understand the emergency government response structures before, during and after disaster

Outcomes:

Learner will be able to…

- Get to know natural as well as manmade disaster and their extent and possible effects on the economy.
- Plan of national importance structures based upon the previous history.
- Get acquainted with government policies, acts and various organizational structures associated with an emergency.
- Get to know the simple do's and don'ts in such extreme events and act accordingly.

Module	Detailed Contents	Contact Hours
01	Introduction: Definition of Disaster, hazard, global and Indian scenario, general perspective, importance of study in human life, Direct and indirect effects of disasters, long term effects of disasters. Introduction to global warming and climate change.	03

DRAFT

02	Natural Disaster and Manmade disasters: Natural Disaster: Meaning and nature of natural disaster, Flood, Flash flood, drought, cloud burst, Earthquake, Landslides, Avalanches, Volcanic eruptions, Mudflow, Cyclone, Storm, Storm Surge, climate change, global warming, sea level rise, ozone depletion Manmade Disasters: Chemical, Industrial, Nuclear and Fire Hazards. Role of growing population and subsequent industrialization, urbanization and changing lifestyle of human beings in frequent occurrences of manmade disasters.	**09**
03	Disaster Management, Policy and Administration: Disaster management: meaning, concept, importance, objective of disaster management policy, disaster risks in India, Paradigm shift	**06**
	in disaster management. Policy and administration: Importance and principles of disaster management policies, command and co-ordination of in disaster management, rescue operations-how to start with and how toproceed in due course of time, study of flowchart showing the entire process.	
04	Institutional Framework for Disaster Management in India: Importance of public awareness, Preparation and execution of emergency management programme. Scope and responsibilities of National Institute of Disaster Management (NIDM) and National disaster management authority (NDMA) in India.Methods and measures to avoid disasters, Management ofcasualties, set up of emergency facilities, importance of effectivecommunication amongst different agencies in such situations. Use of Internet and softwares for effective disaster management. Applications of GIS, Remote sensing and GPS in this regard.	**06**
05	Financing Relief Measures: Ways to raise finance for relief expenditure, role of government agencies and NGO's in this process, Legal aspects related tofinance raising as well as overall management of disasters. Various NGO's and the works they have carried out in the past onthe occurrence of various disasters, Ways to approach these teams. International relief aid agencies and their role in extreme events.	**09**
06	Preventive and Mitigation Measures: Pre-disaster, during disaster and post-disaster measures in some events in general structural mapping: Risk mapping, assessment and analysis, sea walls and embankments, Bio shield, shelters, early warning and communication Non Structural Mitigation: Community based disasterpreparedness, risk transfer and risk financing, capacity development and training, awareness and education, contingency plans. Do's and don'ts in case of disasters and effective implementation of relief aids.	**06**

DRAFT

Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Objectives:

- To understand the importance energy security for sustainable development and the fundamentals of energy conservation.
- To introduce performance evaluation criteria of various electrical and thermal installations to facilitate the energy management
- To relate the data collected during performance evaluation of systems for identification of energy saving opportunities.

Outcomes:

Learner will be able to…

- To identify and describe present state of energy security and its importance.
- To identify and describe the basic principles and methodologies adopted in energy audit of an utility.
- To describe the energy performance evaluation of some common electrical installations and identify the energy saving opportunities.
- To describe the energy performance evaluation of some common thermal installations and identify the energy saving opportunities
- To analyze the data collected during performance evaluation and recommend energy saving measures

Module	Detailed Contents	Contact Hours
01	**Energy Scenario:** Present Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy Security, Energy Conservation and its Importance, Energy Conservation Act-2001 and its Features. Basics of Energy and its various forms, Material and Energy Balance	04

DRAFT

02	**Energy Audit Principles:** Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach-understanding energy costs, Bench marking, Energy performance, Matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution. Elements of monitoring& targeting; Energy audit Instruments; Data and information-analysis. Financial analysis techniques: Simple payback period, NPV, Return on investment (ROI), Internal rate of return (IRR)	**08**
03	**Energy Management and Energy Conservation in Electrical System:** Electricity billing, Electrical load management and maximum demand Control; Power factor improvement, Energy efficient equipments and appliances, star ratings. **Energy efficiency measures in lighting system, Lighting control:** Occupancy sensors, daylight integration, and use of intelligent controllers. Energy conservation opportunities in: water pumps, industrial drives, induction motors, motor retrofitting, soft starters, variable speed drives.	**10**
04	**Energy Management and Energy Conservation in Thermal Systems:** Review of different thermal loads; Energy conservation opportunities in: Steam distribution system, Assessment of steam distribution losses, Steam leakages, Steam trapping, Condensate and flash steam recovery system. General fuel economy measures in Boilers and furnaces, Waste heat recovery, use of insulation- types and application. HVAC system: Coefficient of performance, Capacity, factors affecting Refrigeration and Air Conditioning system performance and savings opportunities.	**10**
05	**Energy Performance Assessment:** On site Performance evaluation techniques, Case studies based on: Motors and variable speed drive, pumps, HVAC system calculations; Lighting System: Installed Load Efficacy Ratio (ILER) method, Financial Analysis.	**04**
06	**Energy conservation in Buildings:** Energy Conservation Building Codes (ECBC): Green Building, LEED rating, Application of Non-Conventional and Renewable Energy Sources	**03**

Pre-requisite:

- Interest in societal development.

Course Objective:

- To understand the characteristics of rural Society and the Scope and Nature and Constraints of rural Development.
- To study Implications of 73rd CAA on Planning, Development and Governance of Rural Areas
- The objective of the course is an exploration of human values, which go into making a ‘good’ human being, a ‘good’ professional, a ‘good’ society and a ‘good life’. The context is the work life and the personal life of modern Indian professionals.
- To understand the Nature and Type of Human Values relevant to Planning Institutions.

Course Outcome:

- Students will be able to apply knowledge for Rural Development.
- Students will be able to apply knowledge for Management Issues.
- Students will be able to apply knowledge for Initiatives and Strategies
- Students will be able to develop acumen for higher education and research.
- Students will master the art of working in group of different nature.
- Students will develop confidence to take up rural project activities independently.

Module	Contents	Contact Hours
1	Introduction to Rural Development Meaning, nature and scope of development; Nature of rural society in India; Hierarchy of settlements; Social, economic and ecological constraints for rural development.	04

DRAFT

2	Roots of Rural Development in India Rural reconstruction and Sarvodaya programme before independence; Impact of voluntary effort and Sarvodaya Movement on rural development; Constitutional direction, directive principles; Panchayati Raj - beginning of planning and community development; National extension services.	**04**
3	Post-Independence rural Development BalwantRai Mehta Committee - three tier system of rural local Government; Need and scope for people's participation and Panchayati Raj; Ashok Mehta Committee - linkage between Panchayati Raj, participation and rural development.	**04**
4	Rural Development Initiatives in Five Year Plans Five Year	**06**
	Plans and Rural Development; Planning process at National, State, Regional and District levels; Planning, development, implementing and monitoring organizations and agencies; Urban and rural interface - integrated approach and local plans; Development initiatives and their convergence; Special component plan and sub-plan for the weaker section; Micro-eco zones; Data base for local planning; Need for decentralized planning; Sustainable rural development.	
5	Post 73rd Amendment Scenario 73rd Constitution Amendment Act, including - XI schedule, devolution of powers, functions and finance; Panchayati Raj institutions - organizational linkages; Recent changes in rural local planning; Gram Sabha - revitalized Panchayati Raj; Institutionalization; resource mapping, resource mobilization including social mobilization; Information Technology and rural planning; Need for further amendments.	**04**
6	Values and Science and Technology Material development and its values; the challenge of science and technology; Values in planning profession, research and education.	**04**
7	Types of Values Psychological values — integrated personality; mental health; Societal values — the modern search for a good society; justice, democracy, rule of law, values in the Indian constitution; Aesthetic values — perception and enjoyment of beauty; Moral and ethical values; nature of moral judgment; Spiritual values; different concepts; secular spirituality; Relative and absolute values; Human values— humanism and human values; human rights; human values as freedom, creativity, love and wisdom.	**06**
8	Ethics Canons of ethics; ethics of virtue; ethics of duty; ethics of responsibility; Work ethics; Professional ethics; Ethics in planning profession, research and education	**04**

Assessment

Internal

- Assessment consists of two tests which should be conducted at proper intervals.

DRAFT

End Semester theory examination

- Question paper will comprise of 6 questions each carrying 20 questions.
- Total 4 questions need to be solved
- Question no.1 will be compulsory based on entire syllabus wherein sub questions can be asked.
- Remaining questions will be randomly selected from all the modules
- Weightage of marks should be proportional to number of hours assigned to each module

Recommendation

Students can take any one or two live projects beneficial to rural population orsociety at large.

Semester VII

Course Code	Course Name	Credits
CHL701	Instrumentation Process Dynamics and Control Lab	1.5

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
-	3	-	-	1.5	-	1.5

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR/OR	OR	
Test-I	Test-II	Average						
-	-	-	-	-	25	25	--	50

Prerequisites

1. Basics of unit operations.
2. Engineering Physics, Engineering Chemistry and Engineering Mathematics (Linear Algebra, Differential equations and Laplace Transforms)
3. Basic laws of Conservations
4. Knowledge of safety and precautions to be taken in laboratories.

Lab Objectives

1. To understand dynamic behavior of process systems and equipments.
2. To analyze the characteristics of different types control valves.
3. To calibrate various measuring devices
4. To operate closed-loop control system
5. To understand the effect of controller parameters in the response of dynamic systems
6. To optimize the controller parameters in controller tuning process

List of Suggested Experiments

- Dynamic Response of First order system (Thermometer) to step input
- Dynamic Response of First order system (Liquid Level) to impulse input
- Dynamic Response of Non-Interacting system to step input
- Dynamic Response of Interacting system to step input
- Calibration of Measuring Devices.
- Dynamic Response of second order system (Manometer) to step input
- Inherent Characteristics of Control Valves

DRAFT

- Effective Characteristics of Control Valves
- Closed loop control system
- Open loop control system
- Tuning of control system
- Development of Empirical Model from Process Data
- Note: Virtual platforms can be used for better understanding of concepts (Virtual platform should be used for at least one Experiment).

Lab Outcome

On completion of the course the student will:

1. Analyze the dynamic behavior of a system for various inputs
2. Determine the characteristic parameters of a system
3. Analyze the characteristics of control valves
4. Develop Empirical Model from Process Data
5. Analyze various measuring devices
6. Tune the controller parameter

Term work

Term work should be evaluated based on performance in practical.

Practical journal:	20 marks
Attendance:	05 marks
Total:	25 marks

Practical Examination

- Duration for practical examination will be same as assigned to respective lab per week
- A student will become eligible for practical examination after completing 8 out of 10 experiments

DRAFT

Semester VII

Course Code	Course Name	Credits
CHL702	Chemical Engineering Equipment Design Lab	1.5

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
-	03	-	-	1.5	-	1.5

Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR/OR	OR	
Test-I	Test-II	Average						
-	-	-	-	-	25	-	25	50

Prerequisites

1. Fundamentals of units
2. Elementary theory of engineering mechanics,
3. Engineering drawing.
4. Knowledge of Heat and Mass transfer operations
5. Concepts of Mechanical operations

Course Objectives

1. To understand the basic of design and Construction of Pressure Vessels.
2. To understand the basic of design and Construction of High-Pressure Vessels
3. To understand the basic of construction and design of Reaction vessel and Agitator
4. To understand the basic of design and Construction of Heat transfer equipment
5. To understand the basic of design and Construction of Mass Transfer equipments.
6. To understand the basic of construction of Storage Vessel and Supports to vessel

List of Experiments (minimum eight)

Experiment no.	Details of Experiment	Lab Hours
1	Pressure Vessel	3
2	High Pressure Vessel	3
3	Reaction Vessel	3
4	Agitators	3
5	Heat Exchangers	3
6	Evaporator	3
7	Distillation Column	3
8	Storage Vessel	3
9	Supports to vessels	3
10	Autocad / PID	3

DRAFT

Course Outcome

On completion of the laboratory course the students will be able to:

1. Design and pictorially represent Pressure vessel.
2. Design and pictorially represent High pressure vessel.
3. Design and pictorially represent Reaction vessel and Agitator
4. Design and draw internals of Heat exchanger and Evaporator.
5. Design and represent pictorially distillation column.
6. Sketch the internals of storage tank and types of supports

Assessment:

Term Work (25 marks)

Distribution of marks will be as follows:

- Laboratory work: 15 marks
- Assignments: 05
- Attendance: 05
- **Total Marks : 25**

End Semester Practical/ Oral Examination/ (25 marks)

Oral Examination will be based on experiments performed in the laboratory

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR/OR	OR	
Test-I	Test-II	Average						
-	-	-	-	-	25	-	25	50

Prerequisites

Knowledge of Physics, Chemistry, Mathematics, Process Calculations, Process Equipment Design, Process Engineering, Heat and Mass transfer, Thermodynamics, Chemical Reaction Engineering, Fluid flow and Process Safety.

Course Objectives

1. To give the knowledge about fire and explosion.
2. To train the students about Fire and Explosion prevention methods and Reliefs techniques.
3. To make the student aware about safety in process and plant.
4. To train the students about hazard identification and risk assessment.
5. To train the students about safety procedures and design and expert manpower to handle the complex industrial environment.
6. to use RAST and CHEF tools to analyze industrial accidents, hazards and risk.

List of Experiments (minimum eight)

Download RAST and CHEF tools from AIChE Website. It is available for FREE. This is readymade template which can be used in MS Excel/Libre office Calc. Enable Macros before using it. Also download **A Tutorial for the Risk Analysis Screening Tool (RAST) and CHEF.**

A total of 5 case studies need to be solved by using RAST-CHEF.

Download 5 case studies available on AIChE website. Complete Hazard Identification and Risk Analysis (HIRA) study for following cases:

1. Chlorine Rail Car
2. CAI and Arnel-Confined Space Explosion
3. BP Texas City-Refinery explosion and fire
4. Phillips Petroleum Company-Explosion and Fire
5. T2 Industries-Runaway Reaction and Explosion

DRAFT

Case study data is not fully provided for below cases. Find the relevant data from internet and enter the values. As most of these case studies are reported **AFTER** accidents and you are going to do a risk analysis **BEFORE** accident, anticipate **MORE** scenarios. The students will have to imagine more accident prone scenarios in following case studies and not only the reported ones.

6. A Massive Fire, BLEVEs, and $5 Million Damages after a Mechanic Improperly Removes a Valve Actuator-102-106, Roy E. Sanders
7. An Eight-Inch Elbow Ruptures from Internal Corrosion and A Blast Results in Worldwide Feed stocks Disruptions and An Eight-Inch Line Ruptures in Mexico City and over 500 People Die-120-121,Roy E. Sanders
8. Flixborough, England,23-25,Crowl, D. A.
9. Seveso, Italy,26-27
10. A Well-Intended Change Yields a Storage Tank Collapse, 32-36, Roy E. Sanders
11. A Severe Pump Explosion Surprises Employees, 168-170

A total of 3 practical's need to be performed from below experiments

1. Flash point
2. Fire point
3. Fire Extinguishers
4. Flammability limits of gases
5. Industrial Safety Awareness (Lecture by Industry Person/ Visit to Industry)
6. Safety Audit Format
7. Electrical Safety Awareness (Expert lecture by Electrical Background Person)

Course Outcome

At the end of the course students will be

1. able to apply the knowledge of mathematics, science, engineering fundamentals for identifying causative and initiating factors of accidents.
2. able to carry out Hazard and Risk analysis by using principles of sciences and engineering.
3. able to develop fire and explosion index and chemical exposure index by analyzing and interpreting of available data.
4. able to use IT tools such as RAST-CHEF to understand and evaluate situations causing industrial fire, explosions and evaluate risk.
5. able to prepare scenario list- guidance and maximum allowable response time for particular chemical plant/equipment
6. Students should be able to prepare Risk Assessment Matrix and Risk summery for particular plant to avoid accidents, for betterment of environment, society and communicate it with higher authorities

Assessment:

Term Work (25 marks)

Distribution of marks will be as follows:

Laboratory Work and Journal : 20 marks
Attendance : 05 marks
Total Marks : 25 Marks

DRAFT

End Semester Practical Examination/orals (25 marks)

Practical Oral Examination will be based on experiments performed in the laboratory.

Semester VII

Course Code	Course Name	Credits
CHP701	Major Project I	03

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
	6#	-		3	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
-	-	-	-	-	25	-	25	50

 # Workload of learner, not faculty for project I. faculty load : semester VII – ½ hour per week per project group

Prerequisites

1. Detail knowledge of applied chemistry.
2. Fundamentals of unit operations.
3. Mass and energy balance calculations
4. Knowledge of chemical engineering economics [Demand supply analysis, rate of interests, profitability methods, depreciation methods]
5. Report writing, feasibility studies.

Objectives

1. To be able to identify advanced topic in chemical engineering based on the technology, its application, and its future potential. (problem identification)
2.To demonstrate a sound technical knowledge of the selected project topic which should be focused on solutions to industrial, societal, and environmental problems with the application of sustainable technology.
3. To carry out market study on the product and find demand supply gap for manufacturing projects.
4. To carry out thorough literature survey on the selected topic and identify research gaps for research projects.
5. To carry out profitability analysis for the selected product and technical/economic feasibility study.
6. To communicate the literature review, proposed work at various platforms for further suggestions, improvement.

Outcomes

After the completion of this project work., Students will be able to
1. Identify advanced topic in chemical engineering based on the technology, its application, and its future potential.

DRAFT

2. Demonstrate a sound technical knowledge of the selected project topic focused on solutions to industrial, societal, and environmental problems with the application of sustainable technology.
3. Carry out market study on the product and find demand supply gap for manufacturing projects.
4. Carry out thorough literature survey on the selected topic and identify research gaps for research projects.
5. Carry out profitability analysis for the selected product.
6. Communicate the literature review, proposed work at various platforms for further suggestions, improvement.

Guidelines:

- Project groups: Groups can be formed with minimum TWO and not more than FOUR students per group.
- Students should spend considerable time in applying all the concepts studied.
- Students are advised to take up industrial/ experimental/ simulation and/or optimization-based topics for their project.
- Students should report their guides with their work on weekly basis.
- For Project oral, external examiners, preferably from industrial background should be appointed.
- For term work marks, punctuality of the students, timely submission of the weekly progress report should be considered along with presentation before guide and departmental expert panel at the end of semester and record of the same should be maintained.

Exam Guidelines

Term Work – 25 Marks:
[• Presentation – 10 Marks • Report -15 Marks]
Oral – 25 Marks

20	**20**	**20**	**80**	**03 Hrs**	**--**	**--**	**--**	**100**

Prerequisites

- Linear Algebra, Process Calculations, Computer Programming

Course Objectives

1. To make students understand writing and solving models of chemical engineering system.
2. To make students understand sequential and equation-oriented simulation of complete flow sheets.
3. To make students understand writing and solving systems of nonlinear equations for single and multiple units.
4. To make students understand simulation of complete flow sheets.
5. To make students understand optimization of single and multiple units.
6. To make students understand artificial neural network principles.

Detailed Syllabus

Module No	Contents	Contact Hrs
1	Modeling Aspects: Definition of process model, physical and mathematical modeling, classification of models, model building, classification of mathematical methods Mathematical Models of Chemical Engineering Systems: Introduction, uses of mathematical models, scope of coverage, principles of formulation, fundamental laws, continuity equations, energy equations, equation of motion, equation of state, equilibrium, kinetics.	**06**

DRAFT

2	Examples of Mathematical Models of Chemical Engineering Systems: Introduction, series of isothermal, constant-hold up CSTR, CSTR with variable holds up, two heated tanks, gas-phase, pressurized CSTR, non-isothermal CSTR, single-component vaporizer, batch reactor, reactor with mass transfer, ideal binary distillation column, batch distillation with holdup. Degree of Freedom analysis Concept of design and rating problem in context of selection variables after DOF analysis.	**08**
3	Artificial Neural Network–Based Models., Applications of ANNs in Chemical Engineering, Advantages of ANN-Based Models. Limitations of ANN-Based Models.	**04**
4	Introduction to Simulation, Sequential and Equation oriented Simulation, Flowsheet topology analysis, Recycle, Partitioning and Tearing of flow sheets. Simulation Examples, Williams Otto Flowsheeting	**08**
5	Numerical Methods for solving sets of nonlinear equations, Newton's method with Armijo Line search, Successive substitution. Solution for models developed in module 2	**08**
6	Introduction to Optimization. Unconstrained single and multi-variable non-linear optimization. Numerical methods for single and multivariable optimization.	**05**

Course Outcomes:

1. The students will be able to write and solve models of chemical engineering system.
2. The students will be able to carry out sequential and equation oriented simulation of complete flow sheets.
3. The student will be able to optimize typical chemical processes.
4. The students will able to solve a process simulation.
5. The students will able to use basics of numerical methods
6. The students will able to understand artificial neural network principles.

Internal Assessment

- Assessment consists of average of two tests which should be conducted at proper interval.

End Semester Theory Examination:

- Question paper will comprise of 6 questions, each carrying 20marks.
- Total 4 questions need to be solved.
- Question No.1 will be compulsory and based on entire syllabus wherein sub questions can be asked.
- Remaining questions will be randomly selected from all the modules.
- Weightage of marks should be proportional to number of hours assigned to each Module.

Semester VIII

Course Code	Course Name	Credits
CHDO8051	Energy System Design (Departmental Optional Course)	03

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
03	-	-	03	-	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs.	--	--	--	100

Prerequisites

1. Knowledge of basics of energy.
2. Knowledge of basic concepts of heat transfer.
3. Knowledge of basic concepts of thermodynamics.
4. Knowledge of mass transfer operations like distillation.
5. Knowledge of mathematics.
6. Preliminary knowledge of economics.

Course Objectives

1. Students should know the sources of energy, present status of energy and importance of energy conservation.
2. Students should understand the importance, concepts and methodologies of energy management and audit to improve energy efficiency of industrial operations and conserve the energy.
3. Students should be aware about best energy efficient technologies and practices to be followed in process industries.
4. Students should learn to apply the energy conservation techniques like heat exchanger networking and heat integration in chemical process units.
5. Students should know importance and ways of waste heat recovery and cogeneration.
6. Students should understand various sources of renewable energy sources and their advantages over conventional energy sources.

Detailed Syllabus

Module No	Content	Contact Hours
1	**Energy Scenario:**	03

DRAFT

	Classification of Energy sources: Commercial & non-commercial, Primary & Secondary, Renewable & non-renewable; Energy consumption patterns; Indian energy scenario; Sectoral energy consumption; Energy needs of growing economy; Energy intensity on purchasing power parity (PPP) basis; Energy pricing, Energy security; Energy strategy for the future; Energy conservation and its importance	
2	**Energy Management & Audit:** Definition, Need and Types of Energy Audit; Energy audit methodology; Energy Management (Audit) Approach; Understanding Energy Costs; Benchmarking Energy Performance; Matching energy use to energy requirements; Maximizing system efficiencies; Optimizing the input energy requirements; Fuel and Energy substitution; Instrumentation used in energy audit; Safety considerations during energy audit; Post audit analysis; Minimum one Case study; ECO analysis based on simple payback period.	**06**
3	**Energy Efficient Technologies:** Energy efficient techniques for lighting system, motors, belt and drives system, fans and pumps system, compressed air system; steam system, refrigeration system.	**03**
4	**Energy Integration in Process Industries and Process Units:** Temperature Pinch analysis – Temperature interval method & Composite curve method; Design of Heat Exchanger Network (HEN) using Pinch analysis; Design of HEN with minimum number of Heat Exchangers; Breaking Loop and Stream Splitting method for HEN Design; Concept of Threshold approach temperature difference and Optimum approach temperature difference. Heat Integration in Distillation column; Reboiler flashing, Heat pumping, Vapor recompression in distillation column.	**12**
5	**Waste Heat Recovery (WHR) and Cogeneration:** Waste heat sources; Quality and Classification of waste heat and its applications; Benefits of WHR; WHR Equipments: Recuperators, Radiation/Convective Hybrid Recuperator, Ceramic Recuperator, Regenerator, Heat wheel, Heat pipe, Waste heat boiler, Economizer, Heat pumps. Definition of Cogeneration and few Basic concepts; Types of Thermodynamic cycles as basis for Cogeneration: Brayton cycle, Rankine cycle, Topping cycle, Bottoming cycle, Combined cycle; Types of Cogeneration system: Steam turbine system, Gas turbine system, Diesel engine system, Distributed cogeneration system.	**10**
6	**New and Renewable Energy Sources:** Concept of new and renewable energy; Solar energy; Wind energy; Tidal energy; Geothermal energy; Energy from waste and Biomass.	**05**

Course Outcome

On completion of the course the students will be able to:

1. Understand the present energy status and major steps to be taken to conserve the energy.

DRAFT

2. Know the importance of energy management program, how to carry it and follow the same when they will actual start working in industries.
3. Be aware about best energy efficient practices and will follow the same in future wherever they work.
4. To carry out Heat exchanger networking and learn other heat integration techniques to conserve the energy.
5. Identify sources of waste heat in industry, know the techniques to recover and reuse the waste heat and have knowledge about cogeneration technique.
6. Understand various renewable energy sources, their applications and preference over non-renewable energy sources.

Assessment

- Internal Assessment consists of two tests which should be conducted at proper intervals.
- End Semester theory examination Question paper will comprise of 6 questions each carrying 20 marks; Total 4 questions need to be solved; Question no.1 will be compulsory based on entire syllabus wherein sub questions can be asked; Remaining questions will be randomly selected from all the modules
- Weightage of marks should be proportional to number of hours assigned to each module

Semester VIII

Course Code	Course Name	Credits
CHDO8052	Advanced Separation Technology (Departmental Optional Course)	03

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
03	-	-	03	-	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 hours	--	--	--	100

Prerequisites

1. Mass transfer operations
2. Conventional separation processes

Course Objectives

1	Learn about various adsorbents and to design adsorption column
2	Distinguish the application of supercritical extraction.
3	Familiarize with advanced distillation techniques
4	To have the knowledge of liquid chromatographic process.
5	Distinguish various membranes.
6	Development of specific membrane processes.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Adsorption Process:** Adsorbent such as activated carbon, molecular sieves of various types, activated alumina. Their characteristics and applications. Regeneration & activation of adsorbents. Thermal & pressure swing process. Fixed bed, moving bed, Design of adsorption column for separation and purification. Industrial examples and related numerical.	08
2	**Super critical extraction** Working principle, advantages and disadvantages of supercritical solvents over conventional liquid solvents, advantages and disadvantages of supercritical extraction over liquid- liquid extraction. Commercial applications of supercritical extraction.	06

DRAFT

3	**Advanced distillation techniques** Molecular, reactive and extractive distillation techniques.	**04**
4	**Liquid Chromatographic Process:** Basic concept of chromatography, phenomena and characterization. Typical chromatographic separation systems for preparative chromatography. Applications of chromatography in enzymes and other Industrial separations.	**07**
5	**Membranes:** Introduction to the membrane process, Characterization of membranes: Characterization of porous membranes, characterization of ionic membranes, characterization of non-ionic membranes. Transport process in membrane driving force. Characteristic flux behavior in pressure driven membrane preparation, membrane fouling, methods to reduce fouling. Types of modules: plate and frame, spiral wound, tubular, capillary, hollow fibre modules and liquid membranes.	**08**
6	**Membrane processes:** Introduction to reverse osmosis, nanofiltration, ultrafiltration, microfiltration, dialysis, membrane distillation. Numericals based on reverse osmosis and dialysis Techniques	**06**

Course Outcomes

On completion of the course the students will be able to:

1 Identify the various adsorbents and to design adsorption column.

2 Choose the separation by supercritical extraction.

3 Choose the appropriate separation techniques

4 Understand the application of chromatography.

5 Select, maintain and design various membrane processes.

6 Assess the various techniques of modern separation processes

Internal Assessment (20 Marks):

Consisting **Two Compulsory Class Tests.**

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):

- Weightage of each module in end semester examination will be proportional to number of respective lecture.

DRAFT

- Question paper will comprise of total **six questions, each carrying 20 marks.**
- **Question 1** will be compulsory and should cover **maximum contents of the curriculum.**
- **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).
- Only **Four questions need to be solved.**

Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

The concepts of basic Mathematics as well as a few concepts of higher mathematics.

Course Objectives

1. Overview of Indian financial system, instruments and market.
2. Basic concepts of value of money, returns and risks, corporate finance, working capital and its management
3. Knowledge about sources of finance, capital structure, dividend policy
4. Overview of Indian financial system, instruments and market
5. Basic concepts of value of money, returns and risks, corporate finance, working capital and its management
6. Knowledge about sources of finance, capital structure, dividend policy

Detailed Syllabus

Module No	Course Contents	Contact Hours
1.	**Overview of Indian Financial System:** Characteristics, Components and Functions of Financial System. **Introduction to Financial Accounting** Scope and importance of Financial Accounting. classification of accounts, Preparation of Journal, Ledger , Cash book & Trial balance **Financial Management:** Concept of business finance, Goals & objectives of financial management.	05
2.	**Concepts of Returns and Risks:** Measurement of Historical Returns and Expected Returns of a Single Security and a Two-security Portfolio; Measurement of Historical Risk and Expected Risk of a Single Security and a Two-security Portfolio.	8

DRAFT

	Time Value of Money: Future Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Present Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Continuous Compounding and Continuous Discounting.	
3.	**Overview of Corporate Finance:** Objectives of Corporate Finance; Functions of Corporate Finance—Investment Decision, Financing Decision, and Dividend Decision. **Financial Statement:** Overview of Financial Statements—Balance Sheet, Profit and Loss Account, **Financial Ratio Analysis:** Purpose of Financial Ratio Analysis; Liquidity Ratios; Efficiency or Activity Ratios; Profitability Ratios; Capital Structure Ratios; Stock Market Ratios; Limitations of Ratio Analysis	**08**
4.	**Capital Budgeting:** Meaning and Importance of Capital Budgeting; Inputs for Capital Budgeting Decisions; Investment Appraisal Criterion—Accounting Rate of Return, Payback Period, Discounted Payback Period, Net Present Value(NPV), Profitability Index, Internal Rate of Return (IRR), and Modified Internal Rate of Return (MIRR) **Working Capital Management:** Concepts of Meaning Working Capital; Importance of Working Capital Management; Factors Affecting an Entity's Working Capital Needs; Estimation of Working Capital Requirements; Management of Inventories; Management of Receivables; and Management of Cash and Marketable Securities.	**09**
5.	**Sources of Finance:** Long Term Sources—Equity, Debt, and Hybrids; Mezzanine Finance; Sources of Short Term Finance—Trade Credit, Bank Finance, Commercial Paper; Project Finance. Bonds (Types, features & utility).	**03**
6.	**Capital Structure and Dividend Policy:** Factors Affecting an Entity's Capital Structure; Relation between Capital Structure and Corporate Value; Concept of Optimal Capital Structure ;Meaning and Importance of Dividend Policy; Factors Affecting an Entity's Dividend Decision; Overview of Dividend Policy Theories and Approaches—Gordon's Approach, Walter's Approach, and Modigliani-Miller Approach	**06**

Course Outcome

On completion of the course the students will be able to:

1. understand and define basic terminology used in finance and accounts •
2. Prepare& appraise Financial Statements and evaluate a company in the light of different measurement systems.
3. Analyze the risk and return of alternative sources of financing.
4. Estimate cash flows from a project, including operating, net working capital, and capital spending.

DRAFT

5. Estimate the required return on projects of differing risk ,to estimate the cash flows from an investment project, calculate the appropriate discount rate, determine the value added from the project, and make a recommendation to accept or reject the project
6. Describe and illustrate the important elements in project finance

Internal Assessment (20 Marks):

Consisting Two Compulsory Class Tests. First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):

1.Weightage of each module in end semester examination will be proportional to number of respective lectures.
2.Question paper will comprise of total **six questions, each carrying 20marks.**
3.Question 1 will be compulsory and should cover **maximum contents of the curriculum.**
4.Remaining questions will be mixed in nature (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module3)
5. Only **Four questions need to be solved.**

20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

- Basic knowledge of physics, electrochemistry, electrical properties, thermodynamics, reaction kinetics and transport phenomenon.

Course Objectives

1. To understand the basic elements of electrochemistry which are required for fuel cell.
2. To study different types of fuel cells and their working
3. To analyze performance and operation of fuel cell.
4. To apply thermodynamic principles to fuel cell and related processes.
5. To study Fuel Cell Reaction Kinetics
6. To understand Fuel Cell Charge Transport processes.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Introduction to Electrochemistry**- redox reactions, Revision of concepts of electrochemical cells, Spontaneity of Redox Reaction, Cell Emf Dependency on Changes in Concentration, Nerst equation, Concentration Cells, corrosion, electrodialysis, Quantitative Electrolysis and Faraday's Laws. Introduction to Electrochemical Engineering- Scope and Applications, **Basic Elements of Electrochemistry**- Electric charge, electric current, cathod, anode, chemical kinetics.	4
2	**Fuel cell fundamentals-** Scheme of a proton-conducting fuel cell, Types of Fuel Cells; Design, Proton Exchange Membrane Fuel Cells (PEMFCs), Phosphoric Acid Fuel Cell (PAFC), Solid Acid Fuel Cell (SAFC), High-temperature Fuel Cells, Hydrogen-oxygen Fuel Cell, Comparison of Fuel Cell Types, Efficiency of Leading Fuel Cell Types, Theoretical Maximum	12

DRAFT

	Efficiency, Cogeneration, applications, Market and economics. **Fuel cell-** Operation, Fuel cell performance, fuel cell and environment, Hydrogen production and storage. Safety issues and cost expectation and life cycle analysis of fuel cells.	
3	**Fuel Cell Thermodynamics-** Heat and work potential of a fuel, Relationship between Gibbs Free Energy and Electrical Work, Relationship between Gibbs Free Energy and Reaction Spontaneity, Relationship between Gibbs Free Energy and Voltage, Standard Electrode Potentials: Computing Reversible Voltages, fuel cell efficiency.	7
4	**Fuel Cell Reaction Kinetics-** introduction to electrode kinetics, activation energy and reaction rate, calculating net rate of a reaction, rate of reaction at equilibrium: exchange current density, potential of a reaction at equilibrium: Galvani potential, potential and rate: Butler–Volmer equation, exchange currents and electrocatalysis: how to improve kinetic performance, simplified activation kinetics: tafel equation.	6
5	**Fuel Cell Charge Transport-** charge transport and a voltage loss, characteristics of fuel cell charge transport resistance, physical meaning of conductivity, fuel cell electrolyte classes.	6
6.	**Fuel Cell Mass Transport-** transport in electrode versus flow structure, transport in electrode: diffusive transport, transport in flow structures: convective transport.	4

Course Outcome

On completion of the course the students will be able

1 To apply the concepts of Electrical Potential, Electrical Field, Electrostatic Work, Voltage, Current, Electrochemical Potential, Activation Energy, Electrode & Electrochemical Equilibrium

2 To formulate and calculate relevant transport phenomena such as migration and the characteristics of (diluted) electrolytes. Relate the conversion of matter to the transport of electrical charge.

3 To apply the underlying concepts, methods and application of fuel cell technology.

4 To apply thermodynamic principles to fuel cell processes.

5 To carry out fuel cell kinetics.

6 To understand fuel cell transport processes.

Internal Assessment (20 Marks):
Consisting **Two Compulsory Class Tests**
First test based on approximately 40% of contents of syllabus and second test based on remaining contents of syllabus (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):

- Weightage of each module in end semester examination will be proportional to number of respective lecture

DRAFT

- Question paper will comprise of total **six questions, each carrying 20 marks**
- **Question 1** will be compulsory and should cover **maximum contents of the curriculum.**
- **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module3)
- Only **Four questions need to be solved.**

20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

Prerequisites:

1. Knowledge of biology, chemistry, and pharmaceutical sciences in chemical engineering.
2. As biotechnology transforms everything from medicine to agriculture.

Course Objectives

1. At the end of the course the students should understand the basic concept of biotechnology. They should be able to classify micro-organisms, understand cell structure and basic metabolism.
2. Students should be able to understand basic knowledge about biological polymers.
3. Students should be able to understand basic knowledge about enzyme technology.
4. Students should understand role of biotechnology in medical field and industrial genetics.
5. Students should know importance of biotechnology in agricultural, food and beverage industries, environment, energy and chemical industries.
6. Students should understand to how to recover biological products.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Introduction:** Traditional and modern applications of biotechnology. Classification of micro-organisms. Structure of cells, types of cells. Basic metabolism of cells.	03
2	**Biological polymers:**	05

DRAFT

	Lipids, Proteins, Amino acids, Nucleic acids, Carbohydrates, Macronutrients and micronutrients. PRODUCTION OF BIOMASS: Production of baker's yeast, starter cultures, algae, mushrooms & single cell proteins from different substrates.	
3	**Enzyme Technology:** Nomenclature and classification of enzymes. Enzyme kinetics. Microbial growth kinetics. Michaels Menten Kinetics, Immobilized enzyme kinetics, Immobilization of enzymes. Industrial applications of enzymes.	08
4	**Biotechnology in health care and genetics:** Pharmaceuticals and bio-pharmaceuticals, antibiotics, vaccines and monoclonal antibodies, gene therapy. Industrial genetics, protoplast and cell fusion technologies, genetic engineering& protein engineering, Introduction to Bio-informatics. Potential lab biohazards of genetic engineering. Bioethics	08
5	**Applications of biotechnology:** Biotechnology in agriculture, food and beverage industries, chemical industries, environment and energy sectors.	08
6.	**Product recovery operations:** Dialysis, Reverse osmosis, ultrafiltration, microfiltration, chromatography, electrophoresis, Electrodialysis, crystallization and drying.	07

Course Outcome

On completion of the course the students will be able to:

1 The students will be able to demonstrate understanding of modern engineering techniques used in biotechnology
2 Students will have deep knowledge of biological polymers, enzymes, cell and metabolism.
3 The students will be able to utilize engineering skills and high end recent advances in Biotechnology
4 The students will be able to examine effectively and demonstrate professional and ethical responsibilities
5 Students will be able to estimate how biotechnology used and helps in agricultural, food and beverage industry, chemical industries, pharmaceutical, environment and energy sectors.
6 Students will be able to improve how biological products are recovered.

Internal Assessment (20 Marks):
Consisting **Two Compulsory Class Tests**
First test based on approximately 40% of contents of syllabus and second test based on remaining contents of syllabus (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):
- Weightage of each module in end semester examination will be proportional to number of respective lectures

DRAFT

- Question paper will comprise of total **six questions, each carrying 20 marks**
- **Question 1** will be compulsory and should cover **maximum contents of the curriculum.**
- **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- Total only **Four questions need to be solved.**

20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

1. Engineering Physics and Engineering Chemistry.
2. Fluid flow operations, Heat Transfer Operations & Thermodynamics
3. Particle Size Measurement

Course Objectives

1. To understand the basic scientific concepts of nanoscience and nanotechnology.
2. To analyse the properties of various nano biomaterials.
3. To study properties of various carbon nanotubes.
4. To be able to characterize various Nanostructures.
5. To be able to estimate the properties values of nanomaterials.
6. To understand applications of nanotechnology in various fields.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Fundamentals of Science behind Nanotechnology**: 1.1 Electron , Atom and Ions, Molecules, Metals, Biosystems, Molecular Recognition, 1.2 Electrical Conduction and Ohms Law, Quantum Mechanics and Quantum Ideas, Optics	03
2	**Fullerenes:** 2.1 Combustion Flame Synthesis, Crystal Formation, Sintering, Organic Synthesis Method 2.2 Super Critical Oligomerization, Solar Process, and Electric Arc Process.	04
3	**Carbon Nanotubes (CNT):** 3.1 Synthesis of CNT, Electric Arc Discharge Process, 3.2 Laser Ablation Process, CVD	06

DRAFT

	3.3 Physical Properties of CNTs, Morphology of CNT.	
4	**Nano structuring Methods:** 4.1 Vacuum Synthesis, Gas Evaporation Tech, Condensed Phase Synthesis. 4.2 Sol Gel Processing, Polymer Thin Film, Atomic Lithography, Electro deposition, Plasma Compaction. **Characterization of Nanostructures:** 4.3 Transmission Electron Microscope, Scanning Electron Microscope, 4.4 Microwave Spectroscopy, Raman Microscopy, X ray Diffraction.	**12**
5	**Calculations in Nanotechnology :** 5.1 Particle Size Distribution, Particle Size & Measurement Methods. 5.2 Fluid Particle Dynamics, Particle Collection Mechanisms, Particle Collection Efficiency.	**08**
6	**NanoBiology**: 6.1 Interaction between Biomolecules & Nanoparticle Surface. 6.2 Interactions in the binding of Proteins with Nanoparticles. 6.3 Different Types of Inorganic materials used for the synthesis of Hybrid Nano-bio assemblies, Application.	**06**

Course Outcome

On completion of the course the students will be able to:
1. Understand the essential concepts used in nanotechnology.
2. Identify various types of nanomaterial.
3. Learn various fabrication methods in nanotechnology.
4. Implement characterize methods of nanostructures.
5. Estimate the particle size and its fluid interactions.
6. Determine Interaction of Biomolecules & Nanoparticles.

Internal Assessment (20 Marks):
Consisting **Two Compulsory Class Tests**
First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):

Semester VIII

Course Code	Course Name	Credits
CHDO8064	Chemical Waste Management (Departmental Optional Course)	03

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
03	-	-	03	-	-	03

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
20	20	20	80	03 Hrs	--	--	--	100

Prerequisites

Prerequisites:

- Knowledge of environmental chemistry and fundamentals of environmental engineering.

Course Objectives

1. To assess the activities involved for the proposed and determine the type, nature and estimated volumes of waste to be generated;
2. To identify major pollutant and any potential environmental impacts from the generation of waste at the site;
3. To recommend appropriate waste handling measures / routings in accordance with the current legislative and administrative requirements; and
4. To categorise waste material where practicable (inert material / waste fractions) for disposal considerations i.e. public filling areas / landfill.
5. To ensure the protection of the environment through effective waste management operation.
6. To strive increased self-sufficiency in the management of hazardous waste to minimise the hazardous waste.

Detailed Syllabus

Module No	Course Contents	Contact Hours
1	**Introduction:** Chemical waste management overview. Chemical waste classification, Types of industries and industrial pollution – Characteristics of industrial wastes – Population equivalent – Bioassay studies – effects of industrial effluents on streams, sewer, land, sewage treatment plants and human health. Environmental legislations related to prevention and control of industrial effluents and hazardous wastes.	8

DRAFT

2	**Pollution from major industries:** Sources, Characteristics, waste treatment flow sheets for selected industries such as Textiles, Pharmaceuticals, Sugar, Paper, distilleries, Refineries, fertilizer, thermal power plants – Wastewater reclamation concepts	8
3	**Supporting Industrial Activities and Wastes Generation:** Water treatment and supply systems including soft water, RO water and DM water units, Power systems and captive power units like DG sets and turbines, Boilers and steam systems, Amenities and work environment, Housekeeping, Effluent treatment plants.	6
4	**Waste Handling and Waste Minimization**: Handling, labelling, packaging and disposal procedures for Hazardous chemical waste management. Source reduction, Waste segregation schemes, Waste recycling and reuse, Pre-treatment of wastes; USEPA's waste management hierarchy Multimedia and integrated approaches to waste management, Pollution prevention programs.	6
5	**Waste Treatment and Disposal**: Overview of waste treatment technologies, Domestic wastewater and trade effluent treatment plants, Operation and control of wastewater treatment plants and air pollution control systems, Disposal of treated effluents.	5
6.	**Risk Management**: Chemical emergency response overview, workers safety, contingency plan, Emergency procedures, **Hazardous Management:** State-wise, Status of Hazardous Waste Generation (e-waste) Status of Common Hazardous Waste Treatment, Storage and Capacities, Disposal Facilities.	6

Course Outcome

On completion of the course the students will be able to:

1 Evaluate the subject from the technical, legal and economical points by learning of chemical waste management.

2 Examine the technical points that are required to set up a waste management system.

3 Evaluate recovery, treatment and disposal alternatives according to properties of industrial wastes.

4 Talent to gain knowledge with handling and reduction of waste in a wide perspective

5 Evaluate recovery, treatment and disposal alternatives according to properties of industrial waste

DRAFT

6 Ability to identify hazardous waste and environmental problems, understand, and solve their effects on universal and social scales

Internal Assessment (20 Marks):
Consisting **Two Compulsory Class Tests**
First test based on approximately 40% of contents of syllabus and second test based on remaining contents of syllabus (approximately 40% but excluding contents covered in Test I).

End Semester Examination (80 marks):

- Weightage of each module in end semester examination will be proportional to number of respective lectures
- Question paper will comprise of total **six questions, each carrying 20 marks**
- **Question 1** will be compulsory and should cover **maximum contents of the curriculum.**
- **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module3)
- Only **Four questions need to be solved.**

20	20	20	80	03 Hrs	--	--	--	100

Objectives;

- To familiarize the students with the use of a structured methodology/approach for each and every unique project undertaken, including utilizing project management concepts, tools and techniques.
- To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.

Outcomes:

Learner will be able to…

- Apply selection criteria and select an appropriate project from different options.
- Write work break down structure for a project and develop a schedule based on it.
- Identify opportunities and threats to the project and decide an approach to deal with them strategically.
- Use Earned value technique and determine & predict status of the project.
- Capture lessons learned during project phases and document them for future reference

Module	Detailed Contents	Contact Hours
01	**Project Management Foundation:** Definition of a project, Project Vs Operations, Necessity of project management, Triple constraints, Project life cycles (typical & atypical) Project phases and stage gate process. Role of project manager. Negotiations and resolving conflicts. Project management in various organization structures. PM knowledge areas as per Project Management Institute (PMI).	5

DRAFT

02	**Initiating Projects:** How to get a project started, Selecting project strategically, Project selection models (Numeric /Scoring Models and Non- numeric models), Project portfolio process, Project sponsor and creating charter; Project proposal. Effective project team, Stages of team development & growth (forming, storming, norming & performing), team dynamics.	**6**
03	**Project Planning and Scheduling:** Work Breakdown structure (WBS) and linear responsibility chart, Interface Co-ordination and concurrent engineering, Project cost estimation and budgeting, Top down and bottoms up budgeting, Networking and Scheduling techniques. PERT, CPM, GANTT chart. Introduction to Project Management Information System (PMIS).	**8**
04	**Planning Projects:** Crashing project time, Resource loading and leveling, Goldratt's critical chain, Project Stakeholders and Communication plan.	**6**
	Risk Management in projects: Risk management planning, Risk identification and risk register. Qualitative and quantitative risk assessment, Probability and impact matrix. Risk response strategies for positive and negative risks	
05	**5.1 Executing Projects:** Planning monitoring and controlling cycle. Information needs and reporting, engaging with all stakeholders of the projects. Team management, communication and project meetings. **5.2 Monitoring and Controlling Projects:** Earned Value Management techniques for measuring value of work completed; Using milestones for measurement; change requests and scope creep. Project audit. **5.3 Project Contracting** Project procurement management, contracting and outsourcing,	**8**
06	**6.1 Project Leadership and Ethics:** Introduction to project leadership, ethics in projects. Multicultural and virtual projects. **6.2 Closing the Project:** Customer acceptance; Reasons of project termination, Various types of project terminations (Extinction, Addition, Integration, Starvation), Process of project termination, completing a final report; doing a lessons learned analysis; acknowledging successes and failures; Project management templates and other resources; Managing without authority; Areas of further study.	**6**

Assessment

Internal

- Assessment consists of two tests which should be conducted at proper intervals.

End Semester theory examination

DRAFT

- Question paper will comprise of 6 questions each carrying 20 questions.
- Total 4 questions need to be solved
- Question no.1 will be compulsory based on entire syllabus wherein sub questions can be asked.
- Remaining questions will be randomly selected from all the modules
- Weightage of marks should be proportional to number of hours assigned to each module

Objectives:

- To introduce the students with basic concepts, techniques and practices of the human resource management.
- To provide opportunity of learning Human resource management (HRM) processes, related with the functions, and challenges in the emerging perspective of today's organizations.
- To familiarize the students about the latest developments, trends & differentaspects of HRM.
- To acquaint the student with the importance of inter-personal & inter-group behavioral skills in an organizational setting required for future stable engineers, leaders and managers.

Outcomes:

Learner will be able to…

- Understand the concepts, aspects, techniques and practices of the human resource management.
- Understand the Human resource management (HRM) processes, functions, changes and challenges in today's emerging organizational perspective.
- Gain knowledge about the latest developments and trends in HRM.
- Apply the knowledge of behavioral skills learnt and integrate it with in inter personal and intergroup environment emerging as future stable engineers and managers.

Module	Detailed Contents	Contact Hours

DRAFT

01	**Introduction to HR** • Human Resource Management- Concept, Scope and Importance, Interdisciplinary Approach Relationship with other Sciences, Competencies of HR Manager, HRM functions. • Human resource development (HRD): changing role of HRM – Human resource Planning, Technological change, Restructuring and rightsizing, Empowerment, TQM,Managing ethical issues.	**5**
02	**Organizational Behavior (OB)** • Introduction to OB Origin, Nature and Scope of Organizational Behavior, Relevance to Organizational Effectiveness and Contemporary issues • Personality: Meaning and Determinants of Personality, Personality development, Personality Types, Assessment of Personality Traits for Increasing Self Awareness	**7**
	• Perception: Attitude and Value, Effect of perception on Individual Decision-making, Attitude and Behavior. • Motivation: Theories of Motivation and their Applications for Behavioral Change (Maslow, Herzberg, McGregor); • Group Behavior and Group Dynamics: Work groups formal and informal groups and stages of group development. Team Effectiveness: High performing teams, Team Roles, cross functional and self-directed team. • Case study	
03	**Organizational Structure &Design** • Structure, size, technology, Environment of organization; Organizational Roles & conflicts: Concept of roles; role dynamics; role conflicts and stress. • Leadership: Concepts and skills of leadership, Leadership and managerial roles, Leadership styles and contemporary issues in leadership. • Power and Politics: Sources and uses of power; Politics at workplace, Tactics and strategies.	**6**
04	**Human resource Planning** • Recruitment and Selection process, Job-enrichment, Empowerment - Job-Satisfaction, employee morale. • Performance Appraisal Systems: Traditional & modern methods, Performance Counseling, Career Planning. • Training & Development: Identification of Training Needs, Training Methods	**5**

DRAFT

05	**Emerging Trends in HR** • Organizational development; Business Process Re-engineering (BPR), BPR as a tool for organizational development , managing processes & transformation in HR. Organizational Change, Culture, Environment • Cross Cultural Leadership and Decision Making**:** Cross Cultural Communication and diversity at work**,** Causes of diversity, managing diversity with special reference to handicapped, women and ageing people, intra company cultural difference in employee motivation.	**6**
06	**HR & MIS** Need, purpose, objective and role of information system in HR, Applications in HRD in various industries (e.g. manufacturing R&D, Public Transport, Hospitals, Hotels and service industries **Strategic HRM** Role of Strategic HRM in the modern business world, Concept of Strategy, Strategic Management Process, Approaches to Strategic Decision Making; Strategic Intent – Corporate Mission, Vision, Objectives and Goals **Labor Laws & Industrial Relations** Evolution of IR, IR issues in organizations, Overview of Labor Laws in India; Industrial Disputes Act, Trade Unions Act, Shops and Establishments Act	**10**

Assessment

Internal

- Assessment consists of two tests which should be conducted at proper intervals.

End Semester theory examination

- Question paper will comprise of 6 questions each carrying 20 questions.
- Total 4 questions need to be solved
- Question no.1 will be compulsory based on entire syllabus wherein sub questions can be asked.
- Remaining questions will be randomly selected from all the modules
- Weightage of marks should be proportional to number of hours assigned to each module

Objectives:

- To understand professional ethics in business
- To recognized corporate social responsibility

Outcomes:

Learner will be able to…

- Understand rights and duties of business
- Distinguish different aspects of corporate social responsibility
- Demonstrate professional ethics
- Understand legal aspects of corporate social responsibility

Module	Detailed Contents	Contact Hours
01	**Professional Ethics and Business:** The Nature of Business Ethics; Ethical Issues in Business; Moral Responsibility and Blame; Utilitarianism: Weighing Social Costs and Benefits; Rights and Duties of Business	04
02	**Professional Ethics in the Marketplace:** Perfect Competition; Monopoly Competition; Oligopolistic Competition; Oligopolies and Public Policy **Professional Ethics and the Environment:** Dimensions of Pollution and Resource Depletion; Ethics of Pollution Control; Ethics of Conserving Depletable Resources	08
03	**Professional Ethics of Consumer Protection:** Markets and Consumer Protection; Contract View of Business Firm's Duties to Consumers; Due Care Theory; Advertising Ethics; Consumer Privacy **Professional Ethics of Job Discrimination:** Nature of Job Discrimination; Extent of Discrimination; Reservation of Jobs.	06

20	20	20	80	03 Hrs	--	--	--	100

Objectives:

- To understand intellectual property rights protection system
- To promote the knowledge of Intellectual Property Laws of India as well as International treaty procedures
- To get acquaintance with Patent search and patent filing procedure and applications

Outcomes:

Learner will be able to…

- understand Intellectual Property assets
- assist individuals and organizations in capacity building
- work for development, promotion, protection, compliance, and enforcement of Intellectual Property and Patenting

Module	Detailed Contents	Contact Hours
01	**Introduction to Intellectual Property Rights (IPR)**: Meaning of IPR, Different category of IPR instruments - Patents, Trademarks, Copyrights, Industrial Designs, Plant variety protection, Geographical indications, Transfer of technology etc. **Importance of IPR in Modern Global Economic Environment:** Theories of IPR, Philosophical aspects of IPR laws, Need for IPR, IPR as an instrument of development	05
02	**Enforcement of Intellectual Property Rights:** Introduction, Magnitude of problem, Factors that create and sustain counterfeiting/piracy, International agreements, International organizations (e.g. WIPO, WTO) active in IPR enforcement **Indian Scenario of IPR:** Introduction, History of IPR in India, Overview of IP laws in India, Indian IPR, Administrative Machinery, Major international treaties signed by India, Procedure for submitting patent and Enforcement of IPR at national level etc.	07

DRAFT

03	**Emerging Issues in IPR:** Challenges for IP in digital economy, e-commerce, human genome, biodiversity and traditional knowledge etc.	**05**
04	**Basics of Patents:** Definition of Patents, Conditions of patentability, Patentable and non-patentable inventions, Types of patent applications (e.g. Patent of addition etc), Process Patent and Product Patent, Precautions while patenting, Patent specification Patent claims, Disclosures and non-disclosures, Patent rights and infringement, Method of getting a patent	**07**
05	**Patent Rules:** Indian patent act, European scenario, US scenario, Australia scenario, Japan scenario, Chinese scenario, Multilateral treaties where India is a member (TRIPS agreement, Paris convention etc.)	**08**
06	**Procedure for Filing a Patent (National and International):** Legislation and Salient Features, Patent Search, Drafting and Filing Patent Applications, Processing of patent, Patent Litigation, Patent Publication etc, Time frame and cost, Patent Licensing, Patent Infringement **Patent databases:** Important websites, Searching international Databases	**07**

SEMESTER VIII

Course Code	Course Name	Credits
CHL801	Modelling simulation and Optimization Lab	1.5

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
-	03	-	-	1.5	-	1.5

Theory					Termwork/Practical/ Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	PR/OR	
Test-I	Test-II	Average						
-	-	-	-	-	25	--	25	50

Prerequisites

- Linear Algebra, Process Calculations, Computer Programming

Concept of Experiment:

Students should be able to simulate process models using computer program or mathematical and chemical engineering software such as COCOO/DWSIM/Unisim,/CW sim,/ChemCAD,/Hysys/ Aspen Plus / or any simulator.

Course Objectives

1. To study the types of various mathematical models of engineering processes;
2. To provide an overview of the possibilities of process simulation as a tool for computer systems analysis, which minimizes risks and costs in experimentation.
3. To familiarize students with the techniques of modeling of engineering processes and of the developed model optimization;
4. To introduce students to different commercial software to simulate the chemical processes from the design stage to the control and optimization;
5. To provide the background needed by the chemical engineers to carry out computer-aided analyses of large-scale chemical processes.
6. Demonstrate the ability to use a process simulation

Minimum TEN experiments must be performed.

- Simulation of pipe and pump network flows
- Simulation of linear and nonlinear systems
- Simulation of mass transfer process - distillation
- Simulation of mass transfer process- Absorption
- Simulation of Heat Transfer Process like Shell and tube heat exchanger
- Simulation of chemical reactor like batch, Semi batch, Continuous reactor
- Simulation of Multicomponent flash calculation for ideal and nonideal system

DRAFT

- Simulation of flowsheet calculation (Any chemical manufacturing process)
- Optimization of chemical processes.
- Experiments based on computer program or mathematical and chemical engineering software

Course outcomes

1. Students will learn different types of simulation techniques.

2. Students will apply simulation techniques to solve complex system issues and to select feasible, solutions

3.Student will able to calculate the different physicochemical and thermodynamic properties chemicals;

4.Students will able to understand and analyse simulation of various separation process

5.Students will able to apply optimization parameter in distillation process

6.Students will learn to simulate the models for the purpose of optimum control by using software.

Term work

Term work shall be evaluated based on performance in practical. Practical Journal: 20 marks

Attendance: 05marks

Total: 25marks

Practical Examination

- Duration for practical examination would be the same as assigned to the respective lab per week.
- A student becomes eligible for practical examination after completing a minimum of eight experiments out of ten experiments.

DRAFT

Semester VIII

Course Code	Course Name	Credits
CHL802	Skilled based lab: Software application in Chemical Engineering Lab	1.5

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
-	03	-	-	1.5	-	1.5

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR/OR	OR	
Test-I	Test-II	Average						
-	-	-	-	-	25	-	25	50

Prerequisites:

1. The students should have knowledge of design of unit operation & unit process
2. The students should have knowledge of Mathematics & to solve differential equations
3. They should be aware about basic principles of linear algebra & computer programing
4. The students should have knowledge of Transport phenomenon
5. The students should be aware about selection of Thermodynamic packages

Course Objectives:-

1. To make students understand advantages of software application in chemical engineering.
2. To make students identify and use the software for optimization of the processes in chemical industries.
3. To make students understand writing and solving design problem of chemical engineering System.
4. To make students to design Mass & Heat transfer Equipment's by using various chemical engineering software.
5. To make students understand Material and energy balance through simulation of complete flow sheet of chemical plant.
6. To make students to optimize the process parameters by using chemical engineering software.

List of Experiments (minimum eight)

Experiment No.	Details of Experiment	Lab Hours
1	Simulation of Pipe Network (Pressure drop, Friction factor Head Losses, Pump Power, NPSH)	3
2	Simulation of Heat Transfer Equipment's (Heater and Cooler ,Double Pipe or Shell and Tube Heat exchangers, Plate Type Heat Exchanger)	3

DRAFT

3	Simulation of Chemical Reactors (Plug Flow or Continuous Stirred Tank Reactor, Bubble Column Reactor)	3
4	Simulation of distillation Column (Separation of Butanol and Water system)	3
5	Simulation of Pressure Swing Azeotropic Distillation (Methanol and Acetone)	3
6	Simulation of Advanced Divded Distillation Column (Benzene-Toluene-Xylene)	3
7	Simulation of Thermodynamic cycles (Rankin cycle or Vapor Compression Cycle ,Vapor Absorption cycle)	3
8	Simulation of Extractive Distillation (MethylCycloHexane/Toluene)	3
9	Simulation of Absorption and Desorption Column	3
10	Simulation of any hydrogenation process	3

Students should be able to simulate process models using computer program or chemical engineering software such as COCOO/DWSIM/Unisim,/ CWsim, /ChemCAD,/Hysys/ Aspen Plus /CFD or any simulator.

Course Outcomes:

1. Students will become aware of application of software in chemical engineering.
2. Students will be able to identify and use the software for optimization of the processes in chemical industries.
3. The students will be able to design unit operation and unit process by using chemical engineering software .
4. The student will be able to do the material and energy balance of chemical plant
5. The student will be able to optimize typical chemical processes.
6. The students will be able to solve the trouble shooting problem in chemical plants by using various chemical engineering software's.

Assessment:
Term Work (25 marks)
Distribution of marks will be as follows:
Laboratory work: 20 marks
Attendance: 05 marks
End Semester Orals (25 marks)
Orals on experiments done in the laboratory

Semester VIII

Course Code	Course Name	Credits
CHP801	Major Project II	06

Course Hours			Credits Assigned			
Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
-	12#	-	-	06	-	06

Theory					Term Work/Practical/Oral			Total
Internal Assessment			End Sem Exam	Duration of End Sem Exam	TW	PR	OR	
Test-I	Test-II	Average						
-	-	-	-	-	50	-	100	150

 # indicates work load of Learner (Not Faculty), for Major Project; Faculty load: semester VIII – 1 hour per week per project group

Prerequisites

1. Detail knowledge of applied chemistry, unit operations, reaction engineering, heat transfer.
2. Basics of process engineering and economics.
3. Basics of mathematics, process equipment design.
4. Fundamentals of modeling and simulation and related software.

Objectives

1.To demonstrate a sound technical knowledge of the selected project topic which should be focused on solutions to industrial, societal and environmental problems with the application of sustainable technology.
2. To undertake problem formulation and solution.
3. To develop flowsheet and PID diagram for manufacturing projects as applicable.
4. To design engineering solutions to complex problems utilizing a systems approach.
5. To design and carry out experimental runs and validate the results.
6. To communicate the findings with engineers and the community at large in written and oral form.

Outcomes

After the completion of project work., Students will be able to
1. Demonstrate a sound technical knowledge of the selected project topic related to industrial, societal and environmental problems with the application of sustainable technology.
2. Carry out problem formulation and solution.
3. Develop flowsheet and PID diagram for manufacturing projects as applicable.
4. Design and perform experiments and analyze results for research project. In case of manufacturing project, develop complete flow sheet and PID diagram.

DRAFT

5. Apply knowledge of the chemical engineering subjects for interpretation and analysis of experimental results and formulate a model and use suitable software for comparing results and optimize the parameters as and when required.
6. Write research article, project report and present the findings before experts and society at large.

Guidelines:

- Project groups: Groups can be formed with minimum TWO and not more than FOUR students per group.
- Students should spend considerable time in applying all the concepts studied.
- Students are advised to take up industrial/ experimental/ simulation and/or optimization-based topics for their project.
- Students should report their guides with their work on weekly basis.
- For Project oral, external examiners, preferably from industrial background should be appointed.
- For term work marks punctuality of the students, timely submission of the weekly progress report should be considered along with presentation before guide and departmental expert panel and record of the same should be maintained.

Exam Guidelines

Term Work – 50 Marks:

- Presentation – 20 Marks
- Project Report -30 Marks

Oral – 100 Marks

DRAFT
